Description

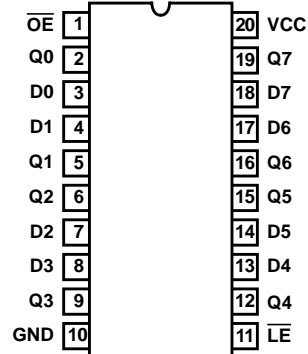

The Intersil HCTS373MS is a Radiation Hardened octal transparent three-state latch with an active-low output enable. The outputs are transparent to the inputs when the Latch Enable (\overline{LE}) is HIGH. When the Latch Enable (\overline{LE}) goes LOW, the data is latched. The Output Enable (\overline{OE}) controls the three-state outputs. When the Output Enable (\overline{OE}) is HIGH, the outputs are in the high impedance state. The latch operation is independent of the state of the Output Enable.

The HCTS373MS utilizes advanced CMOS/SOS technology to achieve high-speed operation. This device is a member of radiation hardened, high-speed, CMOS/SOS Logic Family.

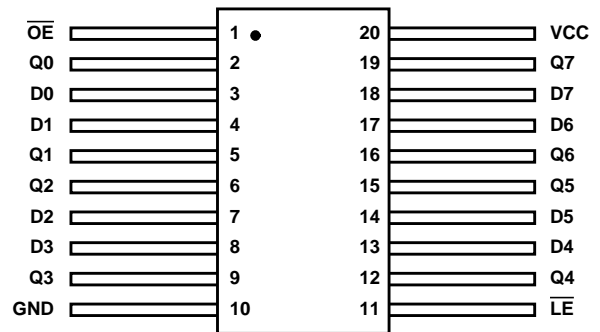

The HCTS373MS is supplied in a 20 lead Ceramic flatpack (K suffix) or a SBDIP Package (D suffix).
