

TA75393P, TA75393PA, TA75393S, TA75393F, TA75393FB**DUAL COMPARATOR**

This device consist of two independent voltage comparators that designed to operate from a single power supply over a wide range of voltage.

Normal Operation from dual supplies is also to be guaranteed on voltage range from 2 V to 36 V.

V_{CC} is necessary at least more 1.5 V than the input common mode voltage.

The output can be connected to other open collector outputs to achieve Wired-OR relation ship.

FEATURES

- Be possible to operate at the wide range single or two supply voltage.
2~36 V or $\pm 1\sim 18$ V
- Low supply current : 0.8 mA (Typ.)
- Low input offset voltage : ± 2 mV (Typ.)
- Wide common mode input voltage : $0\sim V_{CC} - 1.5$ V
- Output is compatible with TTL, DTL, MOS and C-MOS.
- Output is open collector and wired-OR possible.

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
