

FEATURES

- High Gain: 200 V/mV typ
- Single or Dual Supply Operation
- Input Voltage Range Includes Ground
- Low Power Consumption (1.5 mW/Comparator)
- Low Input Bias Current: 100 nA max
- Low Input Offset Current: 10 nA max
- Low Offset Voltage: 1 mV max
- Low Output Saturation Voltage: 250 mV @ 4 mA
- Logic Output Compatible with TTL, DTL, ECL, MOS and CMOS
- Directly Replaces LM139/239/339 Comparators
- Available in Die Form

PIN CONNECTIONS

- 14-Lead Cerdip
- 14-Lead Plastic DIP
- 14-Lead SOIC

GENERAL DESCRIPTION

Four precision independent comparators comprise the CMP04. Performance highlights include a very low offset voltage, low output saturation voltage and high gain in a single supply design. The input voltage range includes ground for single supply operation and V^- for split supplies. A low power supply current of 2 mA, which is independent of supply voltage, makes this the preferred comparator for precision applications requiring minimal power consumption. Maximum logic interface flexibility is offered by the open-collector TTL output.

NOTES

¹At output switch point, $V_O = 1.4\ \text{V}$, $R_S = 0\ \Omega$ with V_+ from $5\ \text{V}$; and over the full input common-mode range ($0\ \text{V}$ to $V_+ - 1.5\ \text{V}$).

²Guaranteed by design.

³Sample tested.

⁴The input common-mode voltage or input signal voltage should not be allowed to go negative by more than $0.3\ \text{V}$. The upper end of the common-mode voltage range is $V_+ - 1.5\ \text{V}$, but either or both inputs can go to $+30\ \text{V}$ without damage.

⁵ $R_L \geq 15\ \text{k}\Omega$, $V_+ = 15\ \text{V}$, $V_{CM} = 1.5\ \text{V}$ to $13.5\ \text{V}$.

NOTES

¹Absolute maximum ratings apply to both DICE and packaged parts, unless otherwise noted. Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those listed in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

² θ_{JA} is specified for worst case mounting conditions, i.e., θ_{JA} is specified for device in socket for cerdip and plastic DIP packages; θ_{JA} is specified for device soldered to printed circuit board for SO package.

CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as $4000\ \text{V}$ readily accumulate on the human body and test equipment and can discharge without detection. Although the CMP04 features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.

NOTES

Electrical tests are performed at wafer probe to the limits shown. Due to variations in assembly methods and normal yield loss, yield after packaging is not guaranteed for standard product dice. Consult factory to negotiate specifications based on dice lot qualification through sample lot assembly and testing.
