GENERAL DESCRIPTION

The AD8605, AD8606 and AD8608 are single, dual and quad rail-to-rail input and output single supply amplifiers featuring very low offset voltage, low input voltage and current noise and wide signal bandwidth. These amplifiers use a patented trimming technique that achieves superior precision without laser trimming. All are fully specified to operate from +3V to +5V single supply.

The combination of low offsets, low noise, very low input bias currents, and high speed make these amplifiers useful in a wide variety of applications. Filters, integrators, photo-diode amplifiers and high

impedance sensors all benefit from the combination of performance features. Audio and other AC applications benefit from the wide bandwidth and low distortion.

Applications for these amplifiers include portable and loop-powered instrumentation, audio amplification for portable devices, portable phone headsets, bar code scanners, and multi-pole filters.

The ability to swing rail-to-rail at both the input and output enables designers to buffer CMOS ADCs, DACs, ASICs and other wide output swing devices in single supply systems.

The AD8605, AD8606 and AD8608 are specified over the extended industrial (-40° to +125°C) temperature range. The AD8605, single, is available in the tiny 5-lead SOT-23 package. The AD8606, dual, is available in the 8-lead micro-SOIC and narrow SOIC surface mount packages. The AD8608, quad, is available in 14-lead TSSOP and narrow 14-pin SOIC packages.

SOT, MSOP and TSSOP versions are available in tape and reel only.
