*Same as SO-20 with 300 mil wide body.

**Average current per channel, measured with all eight channels connected in parallel.

Features

- Low drain to source leakage for AN0116 and AN0132
- 200-volt to 400-volt capability
- Interfaces directly to CMOS logic
- 8 independent channels
- Low crosstalk between channels
- Low power dissipation
- Pin compatible with industry standard driver array
- Freedom from secondary breakdown

General Description

The Supertex AN01 series of high voltage arrays is designed to provide the interface between MOS logic and loads requiring high voltages and intermediate currents. Each circuit consists of eight channels in a common-source configuration with open drains. This design minimizes the number of package leads needed.

The AN0116 and AN0132 are ideally suited for low leakage/high impedance measurement, providing excellent accuracy and resolution for Automatic Test Equipment.

Applications

- High impedance/low leakage measurements for Bare Board Testers
- High voltage piezoelectric transducer drivers
- High voltage electroluminescent panel drivers
- High voltage electrostatic array drivers
- General multi-channel driver array

Absolute Maximum Ratings

Drain-to-Source Voltage	BV _{DSS}
Drain-to-Gate Voltage	BV _{DGS}
Gate-to-Source Voltage	± 20V
Operating and Storage Temperature	-55°C to +150°C
Soldering Temperature*	300°C
Channel-to-Channel Crosstalk	10mV/V

*Distance of 1.6 mm from case for 10 seconds.

LittleDiode supplies new, hard to find or obsolete electronic components and semiconductors all over the world.

With over two million different components listed you are sure to find the part you need.

Feel free to visit us today at our online store:

LittleDiode.com

Looking forward to providing you with the best possible service.
