Description

Powerex Silicon Controlled Rectifiers (SCR) are designed for phase control applications. These are all-diffused, Press-Pak (Pow-R-Disc) devices employing the field-proven amplifying (di/namic) gate.

Features:

- Low On-State Voltage
- High di/dt
- High dv/dt
- Hermetic Packaging
- Excellent Surge and I²t Ratings

Applications:

- Power Supplies
- Battery Chargers
- Motor Control
- Light Dimmers
- VAR Generators

Ordering Information

Example: Select the complete five or six digit part number you desire from the table - i.e. C781L is a 2000 Volt, 2500 Ampere Phase Control SCR.

- NOTES:**
- Add .002°C/W to account for both case to dissipator interfaces when properly mounted; e.g. $R_{\theta jc} = .014^\circ\text{C/W}$. See Mounting Instructions.
 - DC Thermal Impedance is based on average full cycle junction temperature. Instantaneous junction temperature may be calculated using the following modifications:
 - end of conducting portion of cycle
 - 120° sq. wave add .0012°C/W along entire curve
 - 180° sq. wave add .0010°C/W along entire curve
 - 180° sine wave add .0005°C/W along entire curve
 - end of full cycle
 - any wave, subtract .0005°C/W along entire curve
 - Ask for general mounting instructions.

Phase Control SCR

2500 Amperes Avg/1600-2100 Volts

NOTES:

Thyristor Gate Impedance

- This is enhanced by fast rising gate voltage, increasing anode bias and temperature.
- It is at a minimum for dc voltage, zero bias and low temperature (not shown).
- The maximum impedances expected for C784 and C781, C782 are indicated as curves of gate current versus gate voltage.

Gate Supply

- Load lines for 40V/10 Ω and 30V/15 Ω are shown. The short circuit current rise time should be approximately 0.5 μ s and the duration longer than the delay time expected for the thyristor.

Minimum Acceptable Gate Current

- The intersection of load line and gate characteristic (enriched) indicates the minimum value of actual current flowing into the gate that is required during the delay time interval needed for the published dI/dt and snubber discharge ratings.

Additional

- Peak gate power, P_{GAV} (100 μ s) 250W
- Average gate power, P_{GAV} 35W
- Peak gate current 20A
- Peak reverse voltage V_{orv} 30V
