# Fiber Optic Transmitters and Receivers for SERCOS, PROFIBUS and INTERBUS-S Applications

## Technical Data

**HFBR-1505A/2505A**  
(SMA Tx/Rx for SERCOS)  
**HFBR-1515B/2515B**  
(ST® Tx/Rx for PROFIBUS)  
**HFBR-1505C/2505C**  
(SMA Tx/Rx for INTERBUS-S)

---

### Features

- Meets Industrial SERCOS, PROFIBUS, and INTERBUS-S Standard
- SMA and ST® Ports
- 650 nm Wavelength Technology
- Specified for Use with 1 mm Plastic Optical Fiber and 200 µm Hard Clad Silica
- Auto-Insertable and Wave Solderable
- DC – 10 MBd Data Rate

### Applications

- Industrial Control Data Links
- Factory Automation Data Links
- Voltage Isolation Applications
- PLCs
- Motor Drives
- Sensor, Meter and Actuator Interfaces

### Description

#### SERCOS

SERCOS, an acronym for **SERIAL Realtime COmmunications System**, is a standard digital interface for communication in industrial CNC applications. SERCOS is a European (EN 61491) and international standard (IEC 61491). The optical interface allows data rates of 2, 4, 8, and 16 MBd and data transfer between numerical controls and drives via fiber-optic rings, with voltage isolation and noise immunity. The HFBR-1505A and HFBR-2505A products comply with SERCOS specifications for optical characteristics and connector style, and have guaranteed performance up to 10 MBd. (Typically the 16 MBd required by SERCOS is possible as well but please contact Agilent regarding the plan for the 16 MBd device.)

#### PROFIBUS

PROFIBUS, an acronym of **PROcess FIeld BUS**, is an open fieldbus standard defined for data rates ranging from 9.6 kBd to 12 MBd in selectable steps for wire and optical fiber. PROFIBUS is a German national DIN 19245 standard and a European CENELEC standard EN 50170. The ST® connector is the

recommended optical port of the PROFIBUS optical fiber version but other connectors are allowed as well. The HFBR-1515B and HFBR-2515B comply fully to the technical guideline using Plastic Optical Fiber up to 6 MBd, and have a guaranteed performance at data rates up to 10 MBd. (Typically the 12 MBd is possible as well, but please contact Agilent regarding the plan for the 12 MBd device.)

#### INTERBUS-S

INTERBUS-S, a special open Sensor/Actuator Bus, is finding a broad acceptance in the factory automation industry. The HFBR-1505C and HFBR-2505C were specially designed for this application and can be used with 1 mm POF and 200 µm HCS fiber at the specified data rates of 500 kBd and 2 MBd. The optical transmission guideline is a supplement of the German National DIN E 19258 standard draft. On the European level,

prEN 50254 is the draft of the INTERBUS-S fieldbus.

### Package Information

All HFBR-X5X5X series transmitters and receivers are housed in a low-cost, dual-in-line package that is made of high strength, heat resistant, chemically resistant and UL 94 V-O (UL file # E121562) flame retardant plastic. The transmitters are easily identified by the light grey colored connector port. The receivers are easily identified by the dark grey colored connector port. The package is designed for auto-

insertion and wave soldering so it is ideal for high volume production applications.

### Handling and Design Information

When soldering, it is advisable to leave the protective cap on the unit to keep the optics clean. Good system performance requires clean port optics and cable ferrules to avoid obstructing the optical path. Clean compressed air often is sufficient to remove particles of dirt; methanol on a cotton swab also works well.

### Recommended Chemicals for Cleaning/Degreasing X5X5X Products

*Alcohols:* methyl, isopropyl, isobutyl.

*Aliphatics:* hexane, heptane.

*Other:* soap solution, naphtha.

**Do not use** partially halogenated hydrocarbons such as 1,1,1 trichloroethane, ketones such as MEK, acetone, chloroform, ethyl acetate, methylene dichloride, phenol, methylene chloride or N-methylpyrrolidone. Also, Agilent does not recommend the use of cleaners that use halogenated hydrocarbons because of their potential environmental harm.

*CAUTION: The small junction size inherent in the design of these components increases the components' susceptibility to damage from electrostatic discharge (ESD). It is advised that normal static precautions be taken in handling and assembly of these components to prevent damage and/or degradation which may be induced by ESD.*

### Specified Link Performance

0°C to +70°C unless otherwise noted.

Parameter	Symbol	Min.	Max.	Unit	Condition	Reference
Link Distance with HFBR-1505A/2505A or HFBR-1515B/2515B	1	0.1 0.1	40 200	m m	POF HCS®	Notes 1,2,3,4,6 Notes 1,2,3,5,6
Link Distance with HFBR-1505C/2505C	1	0.1 0.1	50 400	m m	POF HCS®	Notes 1,2,3,4,7 Notes 1,2,3,5,7
Pulse Width Distortion with HFBR-1505A/2505A or HFBR-1515B/2515B	PWD	-30	+30	ns	25% to 75% duty cycle	Note 1
Pulse Width Distortion with HFBR-1505C/2505C	PWD	-125	+125	ns	arbitrary duty cycle	Note 1

#### Notes:

1. With recommended Tx and Rx circuits (60 mA nominal drive current).
2. POF HFBR-Exxyyy 0.23 dB/m worst case attenuation.
3. HCS® 10 dB/km worst case attenuation.
4. Including a 3 dB optical safety margin accounting for link service lifetime.
5. Including a 2 dB optical safety margin accounting for link service lifetime.
6. Signaling rate DC to 10 MBd.
7. Signaling rate DC to 2 MBd.

## HFBR-15X5X Transmitters

The HFBR-15X5X transmitter incorporates a 650 nm LED in a light gray nonconductive plastic housing. The high light output power enables the use of both

plastic optical fiber (POF) and Hard Clad Silica (HCS®). This transmitter can be operated up to 10 MBd using a simple driver circuit. The HFBR-1505X is compatible with SMA connectors, while the HFBR-1515X mates with ST® connectors.

		-7.5	-3.5		POF, $I_{F,dc} = 60$ mA	
		-18.0	-8.5		HCS®, $I_{F,dc} = 60$ mA	
HFBR-1505C INTERBUS-S	$P_T$	-6.2	0.0	dBm	POF, $I_{F,dc} = 60$ mA	Notes 3,8,9 Figure 2
		-16.9	-8.5		HCS®, $I_{F,dc} = 60$ mA	

### Notes:

1. Typical data at 25°C.
2. Optical power measured at the end of 0.5 meters of 1 mm diameter plastic optical fiber with a large area detector.
3. Minimum and maximum values for  $P_T$  over temperature are based on a fixed drive current. The recommended drive circuit has temperature compensation which reduces the variation in  $P_T$  over temperature, refer to Figures 4 and 6.
4. Thermal resistance is measured with the transmitter coupled to a connector assembly and fiber, and mounted on a printed circuit board.
5. To further reduce the thermal resistance, the cathode trace should be made as large as is consistent with good RF circuit design.
6. For  $I_{F,pk} > 60$  mA, the duty factor must maintain  $I_{F,avg} \leq 60$  mA and pulse width  $\leq 1$   $\mu$ s.
7. 1.6 mm below seating plane.
8. Minimum peak output power at 25°C is -5.3 dBm (POF) and -16.0 dBm (HCS®) for 1505C series only.
9. Optical power measured at the end of 1 meter of 1 mm diameter plastic or 200  $\mu$ m hard clad silica optical fiber with a large area detector.
10. Pins 1 and 4 are for mounting and retaining purposes, but are electrically connected; pins 5 and 6 are electrically isolated. It is recommended that pins 1, 4, 5, and 6 all be connected to ground to reduce coupling of electrical noise.
11. Output power with 200  $\mu$ m hard clad silica optical fiber assumes a typical -10.5 dB difference compared to 1 mm plastic optical fiber.

## HFBR-25x5A/B Receivers

The HFBR-25x5A/B receiver consists of a silicon PIN photodiode and digitizing IC to produce a logic compatible output. The IC includes a unique circuit to correct the pulse width distortion of the first bit after a long idle period. This enables operation from DC to 10 MBd

with low PWD for arbitrary data patterns. The receiver output is a “push-pull” stage compatible with TTL and CMOS logic. The receiver housing is a dark grey, conductive plastic. The HFBR-2505A is compatible with SMA connectors, while the HFBR-2515B mates with ST® connectors.

Output Fall Time	t <sub>f</sub>		10	30	ns	C <sub>L</sub> = 10 pF	Note 3

### Notes:

- Typical data are at 25°C, V<sub>CC</sub> = 5.0 V.
- 1.6 mm below seating plane.
- In recommended receiver circuit, with an optical signal from the recommended transmitter circuit.
- Pins 1 and 4 are electrically connected to the conductive housing and are also used for mounting and retaining purposes. It is required that pin 1 and 4 be connected to ground to maintain conductive housing shield effectiveness.
- BER ≤ 10E-9, includes a 10.8 dB margin below the receiver switching threshold level (signal to noise ratio = 12).

Figure 10. Typical POF Receiver Pulse Width Distortion vs. Power Supply Voltage at Low Optical Power, (-21 dBm, 10 MBd).

## HFBR-2505C Receiver

The HFBR-2505C receiver includes a monolithic DC coupled, digital IC receiver with open collector Schottky output transistor. An internal pullup resistor to  $V_{CC}$  is available at

pin 5. The receiver housing is a dark gray conductive plastic and the optical port is compatible with SMA connectors. The specified signal rate of HFBR-2505C is 2 MBd.

Fan Out (TTL)	N		5		

### Notes:

- 1.6 mm below seating plane.
- It is essential that a bypass capacitor 0.1  $\mu$ F be connected from pin 6 to pin 7 of the receiver. Total lead length between both ends of the capacitor and the pins should not exceed 20 mm.
- Pins 1 and 4 are electrically connected to the conductive housing and are also used for mounting and retaining purposes. It is required that pin 1 and 4 be connected to ground to maintain conductive housing shield effectiveness.

## Receiver Electrical/Optical Characteristics

0°C to 70°C, 4.75 V ≤ V<sub>CC</sub> ≤ 5.25 V unless otherwise specified

Parameter	Symbol	Min.	Typ.	Max.	Units	Conditions	Ref.
Input Optical Power Level for Logic "0"	P <sub>R(L)</sub>	-21.6		-2.0	dBm	V <sub>OL</sub> = 0.5 V I <sub>OL</sub> = 8 mA 1 mm POF	Notes 1, 2
		-23.0				V <sub>OL</sub> = 0.5 V I <sub>OL</sub> = 8 mA 200 μm HCS
