

**SINGLE PHASE HALL EFFECT LATCH****AH477A****General Description**

The AH477A is an integrated Hall sensor with H-bridged output driver designed for brushless DC motor applications. The device includes an on-chip Hall sensor for magnetic sensing, an amplifier that amplifies the Hall voltage, a comparator to provide switching hysteresis for noise rejection, a bi-directional drivers for sinking and driving large current load. It also includes an internal bandgap regulator to provide temperature compensated bias for internal circuits and allows a wide operating supply voltage range.

Placing the device in a variable magnetic field, if the magnetic flux density is larger than threshold  $B_{OP}$ , the DO is turned to sink and DOB is turned to drive. This output state is held until the magnetic flux density reverses and falls below  $B_{RP}$ , then causes DO to be turned to drive and DOB turned to sink.

The AH477A is available in TO-94 (SIP-4L) package.

**Features**

- On-Chip Hall Sensor
- Operating Voltage: 3.5V to 18V
- H-Bridge Output Drivers for Single Coil
- Internal Bandgap Regulator for Temperature Compensation
- Low Output Switching Current Noise
- Operating Temperature: -20°C to 85°C
- Low Profile TO-94 (SIP-4L) Package
- ESD Rating: 6000V (Human Body Model)
- Suitable for PWM Power Supply Control Speed

**Applications**

- Single-coil Brushless DC Motor
- Single-coil Brushless DC Fan

ESD (Machine Model)		600	V
ESD (Human Body Model)		6000	V

Note 1: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. "Absolute Maximum Ratings" for extended period may affect device reliability.
