## Design Reference Values

### Single ended measurement

( $V_{CC} = 3.6V$ ,  $T_a = 25^{\circ}C$ )

Item	Symbol	Conditions	Typ.	Unit
Input resistance	$R_{IN}$	$f = 85.38MHz$ , $V_{GCTL} = 1.5V$	900	$\Omega$
Input capacitance	$C_{IN}$		9	pF
Output resistance	$R_{OUT}$		30	$\Omega$

### Notes on Operation

- 1) This IC is a wideband amplifier with wide gain control range. Separate Pin 3 (GND1) and Pin 14 (GND2) to prevent interference between input and output. Furthermore, the decoupling capacitors between Pins 2 and 3, Pins 14 and 15 should be as close to the IC as possible.
- 2) The resistors connected to Pins 17 and 19 should be as close to the IC as possible.
- 3) This IC assumes the excellent characteristics when the differential input impedance between Pins 5 and 7, Pins 9 and 11 is  $500\Omega$ . Refer to the Measurement Circuit for the external element settings, etc.
- 4) Connect the capacitors, which are connected to Pins 12 and 13, to Pin 14 (GND2).
- 5) Pay attention to handling this IC because its electrostatic discharge strength is weak.
