

## 4ch. Read/Write Amplifier for three terminal MIG Head of Hard Disk Drive

### Description

The CXA3171N is a Read/Write Amplifier for the special three terminal MIG head of hard disk drive and designed to handle up to 4 channel heads.

### Features

- Operate on single +5 V power supply
- Low power consumption
  - Read : 95 mW
  - Write : 115 mW +  $I_w \times 5$
- Designed for special three terminal MIG heads
- Read amplifier emitter follower output featuring 420 times gain (typ).
- Differential input capacitance for Read : 6.7 pF (typ)
- Input noise :  $0.46\text{nV} / \sqrt{\text{Hz}}$  (typ)
- Differential Head voltage swing : 9 Vp-p (typ)
- Differential P-ECL write data input
- Built-in write unsafe detection circuit.
- Built-in Servo write function (2/4 ch).
- Built-in IC protection circuit for short of head and GND.
- Read data outputs are high impedance in write mode.
- Built-in supply voltage monitor circuit prohibits incorrect write during power on or abnormal voltage.
- Self switching damping resistance ( $R_D=420 \Omega$ ).

### Function

Read, Write and Write unsafe detection for HDD, power supply ON/OFF detection.

### Structure

Bipolar silicon monolithic IC

24 pin SSOP (Plastic)

### Absolute Maximum Ratings (Ta=25 °C)

• Supply voltage	$V_{CC}$	6	V
• Write current	$I_w$	23	mAo-p
• Operating temperature	$T_{opr}$	-20 to +75	°C
• Storage temperature	$T_{stg}$	-55 to +150	°C
• Allowable power dissipation	$P_D$	800	mW
• WUS/SE pin input current	$I_{SEH}$	15	mA

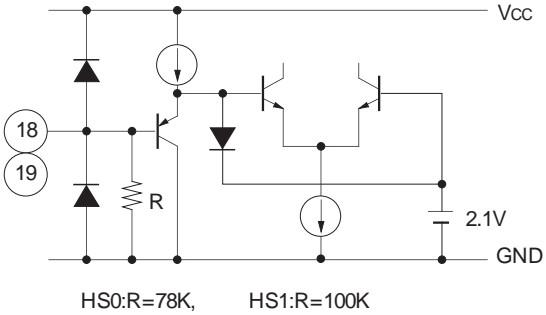

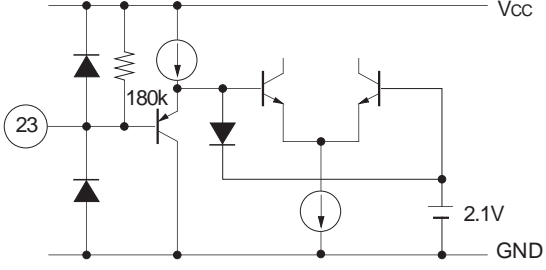

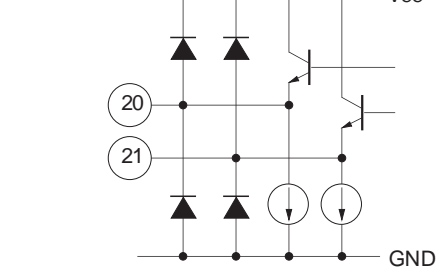

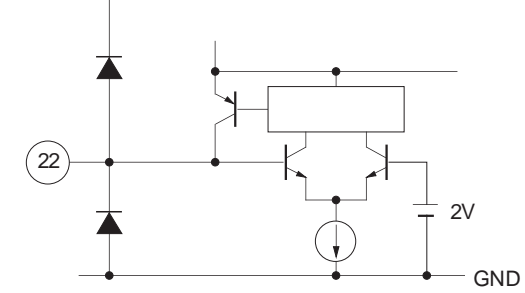

### Recommended Operating Conditions

• Supply voltage	$V_{CC}$	5.0 V±10	%
• Write current	$I_w$	10 to 22	mAo-p

Pin Description

No.	Symbol	Equivalent circuit	Description
24	GND		
1 2 3 4 5 6 7 8 9 10 11 12	H0X H0C H0Y H1X H1C H1Y H2X H2C H2Y H3X H3C H3Y		Head. 4 channels provided.
14	WUS/SE		Write unsafe detection output / Servo Enable signal input.
15 16	WDY WDX		Differential P-ECL write data input.
13	Vcc		5 V power supply.
17	NC		

No.	Symbol	Equivalent circuit	Description
18 19	HS1 HS0	 <p>HS0:R=78K, HS1:R=100K</p>	Head select signal input. Selects one of 4 heads according to Table 2.
23	R/W		Read/Write signal input At "High" : Read, at "Low" : Write.
20 21	RDX RDY		Read Amplifier output.
22	WC		A setting resistor for the write current value is connected between this pin and GND.

(Unless otherwise specified, V<sub>CC</sub>=5 V, T<sub>a</sub>=25 °C, Write current I<sub>w</sub>=20 mA)

Timing Chart 1

Fig. 3

Timing Chart 2

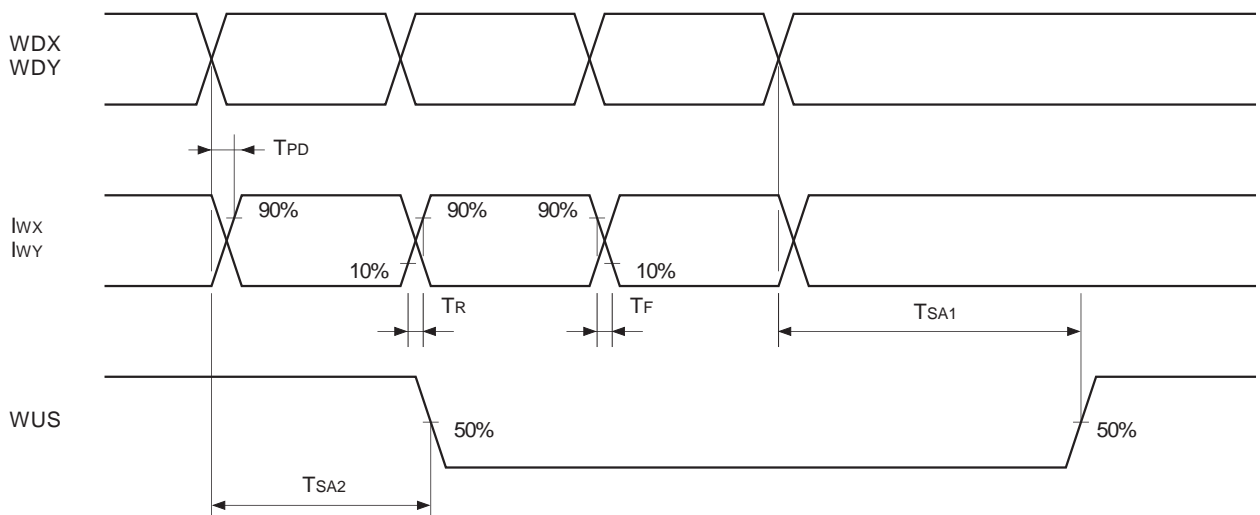

Fig. 4

## Description Functions

### Read amplifier

This is a low noise amplifier for amplifying the signals from the heads with an emitter follower output.

The RDX and RDY are the outputs of the differential amplifier whose polarity between the RDX and X side of the head input is same.

### Write circuit

The Write data input to WDX pin and WDY pin passes through the buffer amp. It drives the Write switch circuit which supplies the Write current to the heads.

The Write current flows into the X side when WDX is "Low" and WDY is "High".

## Mode control

The mode are set as shown Table 1 by  $\overline{R/W}$  and WUS/SE.

R/W	WUS/SE	HS0	HS1	Mode
L	X	See Table 2		Write
H	X			Read
L	**	See Table 3		Servo Write

Table 1. Mode selection

## Head selection

The heads are selected as shown in Table 2 by the HS0, HS1 and HS2 pins.

HS0	HS1	Head
L	L	0
H	L	1
L	H	2
H	H	3

Table 2. Head selection

### Servo write mode \*\*

This mode allows for writing to multiple channels at once.

To enable servo write mode follow these steps:

- (1) Place the device in the Read mode.
- (2) Set HS0 and HS1 following Table 3.
- (3) Set WUS/SE to  $V_{SEH}$ , or input  $I_{SEH}$  to WUS/SE.
- (4) While maintaing step (2) and (3) above make R/W low, placing the device in servo write mode.

### Write unsafe detection circuit

This circuit detects write errors.

In normal Write mode, the WUS output is low; in the conditions listed below, it is high.

- Head inputs is open (under the condition which.  $RH=\infty$  and Write data frequency is  $\leq 10$  MHz)
- Head input is shorted to GND or VCC.
- Write data frequency is abnormally low.
- No write current.
- In read mode.
- Supply voltage is abnormal (see power supply ON/OFF detection).

### Power supply ON/OFF detection

This circuit monitors  $V_{CC}$  to detect erroneous Writes. The error status is established when  $V_{CC}$  falls below the threshold voltage ( $V_{TH}$ ) of the power supply ON/OFF detector, in which case the recording and playback functions are prohibited. When  $V_{CC}$  rises above  $V_{TH}$ , the prohibition of these functions is released.

HS0	HS1	Head
L	L	0, 1
H	L	0, 1, 2, 3
L	H	2, 3
H	H	0, 1, 2, 3

Table 3. Head selection in Servo Write mode

Application Circuit

Application circuits shown are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits or for any infringement of third party patent and other right due to same.

**Notes on operation**

- This device handles high frequency and high gain signals. Please note the following;
  - ◆ Connect  $V_{CC}$  decoupling capacitor of approximately 1000 pF near the device.
  - ◆ Make the GND area as large as possible.
- When using as 2-channel, short-circuit the X and Y sides of unused head pins or leave them open.
- The WC pin is a constant voltage pin. When noise affects this pin, it creates noise in Write c current. Therefore, locate  $R_{wc}$  as close to the device as possible.

**Write unsafe detection circuit**

This circuit uses the voltage waveforms of the head pins for detection.

- ◆  $V_{FB}$  must be more than 2 V. When  $V_{FB} < 2 V$ , it is possible that Write unsafe detection maximum frequency becomes more than 1 MHz.
- ◆ The normal operating area of write unsafe detection circuit is changed by head inductance, head DC resistance, write current and other.

**Application Notes**

Use the following characteristics for reference.

V<sub>cc</sub>=5V, T<sub>a</sub>=25 °C

Item		Symbol	Conditions	Min.	Typ.	Max.	Unit
Write mode	Differential output capacitance	C <sub>o</sub>	Between head input pins		4.5	6	pF
	Differential output resistance	R <sub>o</sub>		300	420	545	Ω
Read mode	Differential input capacitance	C <sub>i</sub>	Between head input pins		6.7	10	pF
	Differential input resistance	R <sub>i</sub>	f=5 MHz	520	1200	2400	Ω
	Output resistance	R <sub>RD</sub>	RDX or RDY, f=5 MHz			50	Ω
Unselected head differential current in Write mode		I <sub>US</sub>	L <sub>H</sub> =1 μH, R <sub>H</sub> =12 Ω I <sub>W</sub> =20 mA			0.2	mAp-p
Write current symmetry		T <sub>AS</sub> *	L <sub>H</sub> =0 μH, R <sub>H</sub> =0 Ω I <sub>W</sub> =20 mA	-0.5		0.5	ns

\*T<sub>AS</sub>=T<sub>1</sub>-T<sub>2</sub>

**Setting of Write current**

Write current can be set with resistor R<sub>wc</sub> (kΩ) at Pin 22.

I<sub>w</sub>=K/R<sub>wc</sub> (mA) Refer to Fig. 5.

Fig.5 Write current vs. R<sub>wc</sub>
