

DS16F95, DS36F95 EIA-485/EIA-422A Differential Bus Transceiver

General Description

The DS16F95/DS36F95 Differential Bus Transceiver is a monolithic integrated circuit designed for bidirectional data communication on balanced multipoint bus transmission lines. The transceiver meets both EIA-485 and EIA-422A standards.

The DS16F95/DS36F95 offers improved performance due to the use of L-FAST bipolar technology. The L-FAST technology allows for higher speeds and lower currents by minimizing gate delay times. Thus, the DS16F95 and DS36F95 consume less power, and feature an extended temperature range as well as improved specifications.

The DS16F95/DS36F95 combines a TRI-STATE® differential line driver and a differential input line receiver, both of which operate from a single 5.0V power supply. The driver and receiver have an active Enable that can be externally connected to function as a direction control. The driver differential outputs and the receiver differential inputs are internally connected to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus whenever the driver is disabled or when $V_{CC} = 0V$. These ports feature wide positive and negative common mode voltage ranges, making the device suitable for multipoint applications in noisy environments.

The driver is designed to accommodate loads of up to 60 mA of sink or source current and features positive and negative current limiting in addition to thermal shutdown for protection from line fault conditions.

The DS16F95/DS36F95 can be used in transmission line applications employing the DS96F172 and the DS96F174 quad differential line drivers and the DS96F173 and DS96F175 quad differential line receivers.

Features

- Meets EIA-485 and EIA-422A
- Meets SCSI-1 (5 MHz) specifications
- Designed for multipoint transmission
- Wide positive and negative input/output bus voltage ranges
- Thermal shutdown protection
- Driver positive and negative current-limiting
- High impedance receiver input
- Receiver input hysteresis of 50 mV typical
- Operates from single 5.0V supply
- Reduced power consumption
- Pin compatible with DS3695 and SN75176A
- Military temperature range available
- Qualified for MIL-STD 883C
- Standard Military Drawings (SMD) available
- Available in DIP (J), LCC (E), and Flatpak (W) packages

Absolute Maximum Ratings (Note 1)

Specifications for the 883 version of this product are listed separately on the following pages.

Storage Temperature Range	-65°C to +175°C
Lead Temperature (Soldering, 60 sec.)	300°C
Maximum Package Power Dissipation* at 25°C	
'J' Package	1300 mW
Supply Voltage	7.0V
Input Voltage (Bus Terminal)	+15V/ -10V
Enable Input Voltage	5.5V

*Derate 'J' package 8.7 mW/°C above 25°C.

Recommended Operating Conditions

	Min	Typ	Max	Units
Supply Voltage (V_{CC})				
DS36F95	4.75	5.0	5.25	V
DS16F95	4.50	5.0	5.50	V
Voltage at Any Bus Terminal (Separately or Common Mode) (V_I or V_{CM})	-7.0		+12	V
Differential Input Voltage (V_{ID})			±12	V
Output Current HIGH (I_{OH})				
Driver			-60	mA
Receiver			-400	μA
Output Current LOW (I_{OL})				
Driver			60	mA
Receiver			16	mA
Operating Temperature (T_A)				
DS36F95	0	+25	+70	°C
DS16F95	-55	+25	+125	°C

Driver Electrical Characteristics

Over recommended supply voltage and operating temperature ranges, unless otherwise specified (Notes 2 & 3)

Symbol	Parameter	Conditions	Min	Typ	Max	Units
V_{IH}	Input Voltage HIGH		2.0			V
V_{IL}	Input Voltage LOW				0.8	V
V_{OH}	Output Voltage HIGH	$I_{OH} = -55$ mA 0°C to +70°C	3.0			V
V_{OL}	Output Voltage LOW	$I_{OL} = 55$ mA 0°C to +70°C			2.0	V
V_{IC}	Input Clamp Voltage	$I_I = -18$ mA			-1.3	V
$ V_{OD1} $	Differential Output Voltage	$I_O = 0$ mA			6.0	V

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The tables of "Electrical Characteristics" provide conditions for actual device operation.

Note 2: Unless otherwise specified min/max limits apply across the $-55^\circ C$ to $+125^\circ C$ temperature range for the DS16F95 and across the $0^\circ C$ to $+70^\circ C$ range for the DS36F95. All typicals are given for $V_{CC} = 5V$ and $T_A = 25^\circ C$.

Note 3: All currents into the device pins are positive; all currents out of the device pins are negative. All voltages are referenced to ground unless otherwise specified.

Note 4: $\Delta|V_{OD}|$ and $\Delta|V_{OC}|$ are the changes in magnitude of V_{OD} and V_{OC} , respectively, that occur when the input is changed from a high level to a low level.

Note 5: In TIA/EIA-422A and TIA/EIA-485 Standards, V_{OC} , which is the average of the two output voltages with respect to ground, is called output offset voltage, V_{OS} .

Note 6: The algebraic convention, where the less positive (more negative) limit is designated minimum, is used in this data sheet for common mode input voltage and threshold voltage levels only.

Note 7: Hysteresis is the difference between the positive-going input threshold voltage, V_{T+} , and the negative-going input threshold voltage, V_{T-} .

Note 8: Refer to TIA/EIA-485 Standard for exact conditions.

Note 9: Only one output at a time should be shorted.

FIGURE 8. Receiver Enable and Disable Times (Notes 10, 11, 13)

Note 10: The input pulse is supplied by a generator having the following characteristics: PRR = 1.0 MHz, 50% duty cycle, $t_r \leq 6.0$ ns, $t_f \leq 6.0$ ns, $Z_O = 50\Omega$.

Note 11: C_L includes probe and stray capacitance.

Note 12: DS16F95/DS36F95 Driver enable is Active-High.

Note 13: All diodes are 1N916 or equivalent.

Note 14: Testing at 20 pF assures conformance to 5 pF specification.

Typical Application

Note:

The line should be terminated at both ends in its characteristic impedance, typically 120Ω.
Stub lengths off the main line should be kept as short as possible.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

This file is the datasheet for the following electronic components:

DS36F95 - <http://www.ti.com/product/ds36f95?HQS=TI-null-null-dscatalog-df-pf-null-wwe>

DS16F95 - <http://www.ti.com/product/ds16f95?HQS=TI-null-null-dscatalog-df-pf-null-wwe>

LittleDiode supplies new, hard to find or obsolete electronic components and semiconductors all over the world.

With over two million different components listed you are sure to find the part you need.

Feel free to visit us today at our online store:

LittleDiode.com

Looking forward to providing you with the best possible service.
