

700ns, Low Distortion, Precision Sample and Hold Amplifier

The HA-5340 combines the advantages of two sample/hold architectures to create a new generation of monolithic sample/hold. High amplitude, high frequency signals can be sampled with very low distortion being introduced. The combination of exceptionally fast acquisition time and specified/characterized hold mode distortion is an industry first. Additionally, the AC performance is only minimally affected by additional hold capacitance.

To achieve this level of performance, the benefits of an integrating output stage have been combined with the advantages of a buffered hold capacitor. To the user this translates to a front-end stage that has high bandwidth due to charging only a small capacitive load and an output stage with constant pedestal error which can be nulled out using the offset adjust pins. Since the performance penalty for additional hold capacitance is low, the designer can further minimize pedestal error and droop rate without sacrificing speed.

Low distortion, fast acquisition, and low droop rate are the result, making the HA-5340 the obvious choice for high speed, high accuracy sampling systems. For a Military temperature range version request the HA-5340/883 data sheet.

Functional Diagram

Features

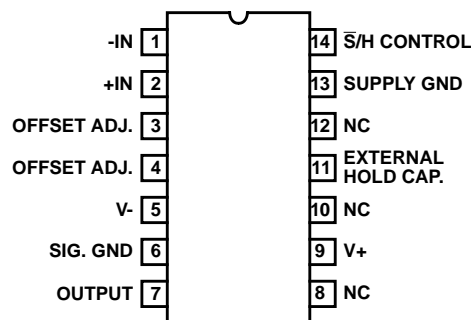

- Fast Acquisition Time (0.01%)700ns
- Fast Hold Mode Settling Time (0.01%)200n
- Low Distortion (Hold Mode)-72dBc ($V_{IN} = 200\text{kHz}$, $f_S = 450\text{kHz}$, $5V_{P-P}$)
- Bandwidth Minimally Affected By External C_H
- Fully Differential Analog Inputs
- Built-In 135pF Hold Capacitor
- Pin Compatible with HA-5320

Applications

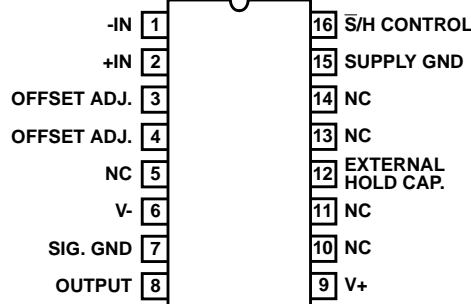

- High Bandwidth Precision Data Acquisition Systems
- Inertial Navigation and Guidance Systems
- Ultrasonics
- SONAR
- RADAR

PDIP Package	90	N/A
SOIC Package	95	N/A
Maximum Junction Temperature (Plastic Package, Note 1)	150°C	
Maximum Storage Temperature Range	-65°C to 150°C	
Maximum Lead Temperature (Soldering 10s)	300°C (SOIC - Lead Tips Only)	

Operating Conditions

Temperature Range	
HA-5340-5	0°C to 75°C
Supply Voltage Range (Typical)	±12V to ±18V

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

1. Maximum power dissipation must be designed to maintain the junction temperature below 150°C for the plastic packages.
2. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.
