

**Microprocessor CORE Voltage Regulator  
Two-Phase Buck PWM Controller**

The ISL6562 two-phase current mode, PWM control IC together with companion gate drivers, the HIP6601A, HIP6602A, HIP6603A or HIP6604 and MOSFETs provides a precision voltage regulation system for advanced microprocessors. Two-phase power conversion is a marked departure from earlier single phase converter configurations previously employed to satisfy the ever increasing current demands of modern microprocessors. Multi-phase converters, by distributing the power and load current results in smaller and lower cost transistors with fewer input and output capacitors. These reductions accrue from the higher effective conversion frequency with higher frequency ripple current due to the phase interleaving process of this topology. For example, a two phase converter operating at 350kHz per phase will have a ripple frequency of 700kHz. Moreover, greater converter bandwidth of this design results in faster response to load transients.

Outstanding features of this controller IC include programmable VID codes from the microprocessor that range from 1.050V to 1.825V with an accuracy of  $\pm 0.8\%$ . Pull up currents on these VID pins eliminates the need for external pull up resistors.

Another feature of this controller IC is the PWRGD monitor circuit which is held low until the CORE voltage increases, to within 18% of the programmed voltage. Over-voltage, 24% above programmed CORE voltage, results in the PWRGD output going low to indicate that the CORE is above the specified limit. Under voltage is also detected and results in PWRGD going low if the CORE voltage falls 18% below the programmed level. Over-current protection folds back the output voltage to 95mV, reducing the regulator dissipation. These features provide monitoring and protection for the microprocessor and power system.

**Ordering Information**

PART NUMBER	TEMP. (°C)	PACKAGE	PKG. NO.
ISL6562CB	0 to 70	16 Ld SOIC	M16.15
ISL6562CB-T	16 Ld SOIC Tape and Reel		
ISL6560/62EVAL1	Evaluation Platform		

**Features**

- Two-Phase Power Conversion
- Precision Channel Current Sharing
- Precision CORE Voltage Regulation
  - $\pm 0.8\%$  Accuracy
- Microprocessor Voltage Identification Input
  - 5-Bit VID Input
  - 1.050V to 1.825V in 25mV Steps
  - Programmable “Droop” Voltage
- Fast Transient Recovery Time
- Over Current Protection
- High Ripple Frequency, (Channel Frequency Times Number of Channels) . . . . . 100kHz to 2MHz

**Applications**

- VRM8.5 Modules
- Intel® Tualatin Processor Voltage Regulator
- Low Output Voltage, High Current DC/DC Converters

**Pinout**

**Block Diagram**

**Simplified Power System Diagram**

**Functional Pin Description**

**VID3 (Pin 1), VID2 (Pin 2), VID1 (Pin 3), VID0 (Pin 4) and VID25mV (Pin 5)**

Voltage Identification inputs from microprocessor. These pins respond to TTL and 3.3V logic signals. The ISL6562 decodes VID bits to establish the output voltage. See Table 1.

**COMP (Pin 6)**

Output of the internal transconductance error amplifier. Voltage at this terminal sets the output current level of the

Current Sense Comparator. Pulling this pin to ground disables the oscillator and drives both PWM outputs low.

**FB (Pin 7)**

Inverting input of the internal transconductance error amplifier.

**CT (Pin 8)**

A capacitor on this terminal sets the frequency of the internal oscillator.

**GND (Pin 9)**

Bias and reference ground. All signals are referenced to this pin.

**PWRGD (Pin 10)**

Open drain connection. A high voltage level at this pin with a resistor connected to this terminal and VCC indicates that CORE voltage is at the proper level,

**CS+ (Pin 11) and CS- (Pin 14)** These inputs monitor the supply current to the converter positive input voltage. CS+ is connected directly to the decoupled supply voltage and current sampling resistor. CS- is connected to the other end of the current sampling resistor and the upper drains of the series transistors.

**PWM2 (Pin 12) and PWM1 (Pin 13)**

PWM outputs connected to the gate driver ICs.

**REF (Pin 15)**

Three volt supply used to bias the output of the transconductance amplifier.

**VCC (Pin 16)**

Bias supply. Connect this pin to a 12V supply.

**Absolute Maximum Ratings**

Supply Voltage (VCC) .....	-0.3V to 15V
CS+, CS- .....	-0.3V to VCC + 0.3V
PWRGD .....	-0.3V to VCC
All Other Inputs and Outputs .....	-0.3V to 5V
ESD Rating	
Human Body Model (Per MIL-STD-883 Method 3015.7) .....	TBD
Machine Model (Per EIAJ ED-4701 Method C-111) .....	TBD

**Thermal Information**

Thermal Resistance (Note 1)	$\theta_{JA}$ (°C/W)
SOIC Package .....	106
Maximum Junction Temperature (Plastic Package) .....	150°C
Maximum Storage Temperature Range .....	-65°C to 150°C
Maximum Lead Temperature (Soldering 10s) .....	300°C
(SOIC - Lead Tips Only)	

**Operating Conditions**

Ambient Temperature Range .....	0°C to 70°C
Maximum Operating Junction Temperature .....	125°C
Supply Voltage, VCC .....	12V $\pm$ 10%

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

## NOTE:

- $\theta_{JA}$  is measured with the component mounted on a low effective thermal conductivity test board in free air. See Tech Brief TB379 for details.

### NOTES:

- Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.
- Dimensioning and tolerancing per ANSI Y14.5M-1982.
- Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
- Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
- The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
- "L" is the length of terminal for soldering to a substrate.
- "N" is the number of terminal positions.
- Terminal numbers are shown for reference only.
- The lead width "B", as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
- Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
