LA5606N**BS/CS Tuner Regulator with On/Off Function****Overview**

The LA5606N is a low saturation regulator IC for BS/CS tuner applications, equipped with four regulators capable of ON/OFF control.

Applications

- BS/CS tuner power supply system.
- Audio Video (AV) equipment with BS/CS receivers.
- Compact electronic equipment.

Functions

- Four low saturation regulators (15.7 V/300 mA, 12 V/150 mA, 9 V/100 mA and 5 V/500 mA).
- Output on/off control ("L" active).
- On-chip protective circuitry (current limiter, thermal shutdown).

Features

- Supports compact set design while incorporating four regulators needed by BS/CS tuners.
- Flexible system design by independent on/off control of V_{O1} , V_{O4} , as well as V_{O2} and V_{O3} pair.
- Reduces internal loss by employment of low saturation regulators.
- Adapting three input pins contributes power dissipation reduction and heat sink design.

Function Table

The following table indicates conditions for operation with $V_{IN1} \geq V_{IN2} \geq V_{IN3}$ ($V_{IN1} \geq 11$ V, $V_{IN2} \geq 6$ V and $V_{IN3} \geq 4$ V).

EN1, EN2, EN3	$V_{O1}, V_{O2}/V_{O3}, V_{O4}$
H	L
L	H

1. Within the table of EN "H" indicates an H level and "L" indicates an L level.
2. In the table of V_O "H" indicates an output on voltage while "L" indicates an output off voltage.
3. All output voltages corresponding to all EN locations are controlled independently.
($EN1 \rightarrow V_{O1}$, $EN2 \rightarrow V_{O2}$ and V_{O3} , $EN3 \rightarrow V_{O4}$)
4. When EN is open, V_O is at the H level.

Notes for Above Applications

1. GND1 and GND2 should be at the same electric potential; since these are connected to the substrate of the LA5606N, the lowest possible electric potential should be used. (If the electric potential of GND1 and GND2 differ, performance characteristics of the LA5606N can not be guaranteed.)
2. Rise and fall times for V_{IN1} , V_{IN2} and V_{IN3} should be unified and concerning these pins operating in an open-circuit state or connected to the ground state is forbidden.
3. When V_{IN1} and V_{IN2} are open or lower than the required value, V_{O1} to V_{O4} are forced off for the IC's protection.
4. Use output capacitors C_{OUT1} and C_{OUT4} rated at 100 μ F or more and C_{OUT2} and C_{OUT3} rated at 47 μ F or more. To prevent oscillation at low temperature, be sure to use less temperature sensitive capacitors.
5. In order to provide stable operation, C_{IN1} to C_{IN3} and C_{OUT1} to C_{OUT4} should be mounted as close to the LA5606N as possible.
6. The NC pins should not be used (No. 1 and No. 14 in the pin layout).
7. The output voltage of each voltage regulator is affected by a change in the load on the other voltage regulators.
