

TENTATIVE TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

TA1310N**NTSC VIDEO, CHROMA, DEFLECTION, AND DEC. DISTORTION
COMPENSATION IC (FOR YUV INTERFACE)**

TA1310N is Video Chroma and deflection signal.
Processing IC for NTSC. On a 56-pin shrink DIP package.
TA1310N has deflection distortion compensation.
TA1310N uses an I²C Bus controls for controllings and settings.

FEATURES

Video Signal Processing

- Built-in Y delay line
- Black stretch
- DC restoration ratio compensation
- Aperture controlled sharpness
- Output for velocity scan modulation (VSM)
- White peak suppression (WPS)

Chroma Signal Processing

- Built-in chroma BPF/TOF
- R-Y and B-Y outputs
- Color/BW situation output by read bus

Weight : 5.55 g (Typ.)

980910EBA1

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.

Sync Signal Processing

- Counts down $32 f_H$
- Dual AFC
- Vertical AGC
- HD and VD outputs
- Vertical frequency fixed mode
- Horizontal and Vertical position alignment
- DC outputs for vertical centering

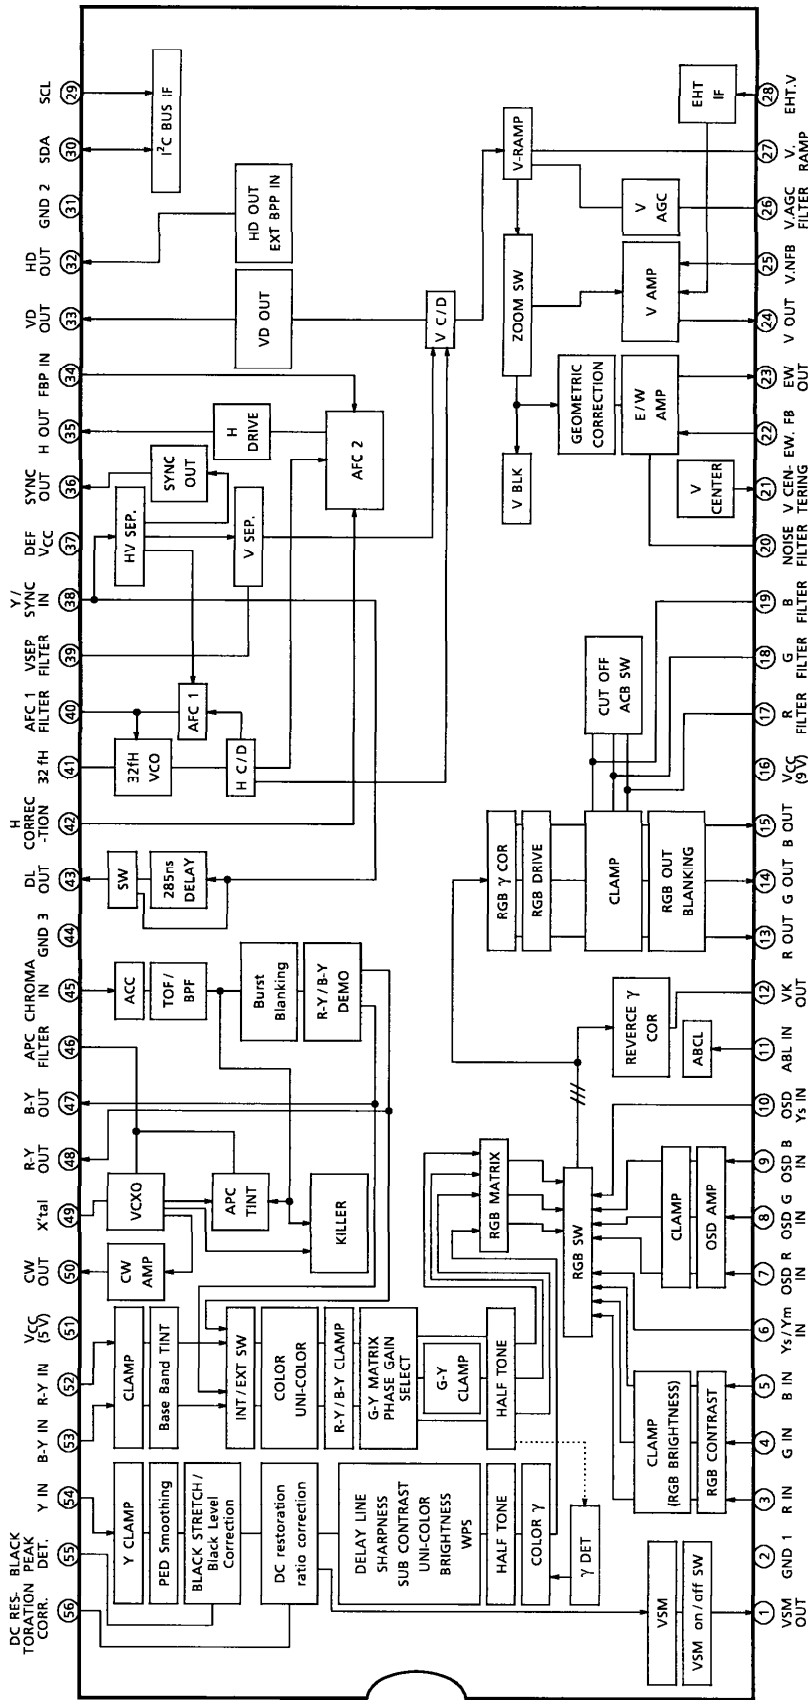

Text Signal Processing

- Analog RGB inputs
- Digital RGB inputs
- Halftone switch (Y_M)
- Cutoff and drive alignment
- YUV inputs

Deflection Correction Function

- Horizontal and Vertical amplitude adjustment
- Vertical linearity correction
- Vertical S correction
- Vertical EHT correction
- E/W parabola correction
- E/W corner correction
- E/W trapezium correction

BLOCK DIAGRAM

TA1310N-3

PIN FUNCTION

PIN No.	SYMBOL	FUNCTION	INTERFACE	I/O SIGNAL
1	VSM OUT	VSM means Verocity Scanning Modulation.	<p>4 MHz peak</p>	
2	GND I	The terminal for GND of Video / Y / TEXT circuits.	—	
3 4 5	RIN GIN BIN	The terminals for Analog RGB signal input. Input signals clamped by coupling capacitors. (*)Even when not in use, connect to GND with a coupling capacitor.	<p>Buffer Clamp</p>	<p>100 IRE = 0.5 V_{p-p} 3.7 V</p>
6	Y _S /Y _M IN	The terminal for switching of Analog RGB Mode and Half tone.	<p>Y_m Y_s</p>	<p>RGB 2.1 V Half Tone 0.7 V TV GND</p>
7 8 9	OSD R IN OSD G IN OSD B IN	The terminals for Analog OSD RGB signal input. Input signals clamped by coupling capacitors. (*)Even when not in use, connect to GND with a coupling capacitor.		<p>100 IRE = 1.25 V_{p-p} 5.5 V</p>

PIN No.	SYMBOL	FUNCTION	INTERFACE	I/O SIGNAL
10	OSD Y _S IN	The terminal for switching of internal RGB signals and Analog OSD RGB signals (Pin 7, 8, 9).		<p>Analog RGB 2.8 V</p> <p>Main GND</p>
11	ABL IN	The terminal for the external unicolor and brightness control. ABL Gain and ABL start point can be set by using BUS.		OPEN 6.0 V
12	VK OUT	The terminal outputs signal in order to input in H-correction (Pin 42). The signal corresponds to RGB signal.		
13 14 15	R OUT G OUT B OUT	The terminals for RGB signal output.		
16	V _{CC} (9 V)	The terminal for V _{CC} Supply 9 V. The terminals is connected to 9 V (typ.).	—	
17 18 19	R Filter G Filter B Filter	Control the RGB output cutoff voltage, holding the standard pulse period comparator output to one vertical period. For this control, use the bus function RGB cutoff. The filters must be low leakage current filters.		

PIN No.	SYMBOL	FUNCTION	INTERFACE	I/O SIGNAL
20	NOISE FILTER	Connect to GND with a 0.47- μ F coupling capacitor.		
21	V Centering	The terminal for the DAC output that controlled by BUS (V-center).		
22	EW FB	The terminal for E /W feedback.		
23	EW OUT	The terminal for output of E/W drive signal.		
24	V OUT	The terminal for output of Vertical drive signal.		
25	V NFB	The terminal for input of Vertical negative feedback. If input voltage is less than 2 V, V-Guard function works and blanks RGB signal output.		

PIN No.	SYMBOL	FUNCTION	INTERFACE	I/O SIGNAL
26	V AGC Filter	The terminal to be connected a capacitor for Automatic gain control of Vertical RAMP signal.		
27	V RAMP	The terminal to be connected a capacitor to generate Vertical RAMP signal.		
28	EHT V	The terminal for the Vertical EHT input.		
29	SCL	The terminal for input of I ² C BUS clock.		
30	SDA	The terminal for input/output of I ² C BUS data.		

PIN No.	SYMBOL	FUNCTION	INTERFACE	I/O SIGNAL
31	GND II	The terminal for the GND of DEF/ I ² C / EW.	—	
32	HD OUT	The terminal for the HD pulse. The suspension period of the Black peak stretching is extended by inputting the external pulse.		
33	VD OUT	The terminal for the VD pulse.		
34	FBP IN	The terminal for the flyback pulse to control H-BLK and H-AFC.		
35	H OUT	The terminal for the Horizontal output.		

PIN No.	SYMBOL	FUNCTION	INTERFACE	I/O SIGNAL
36	SYNC OUT	The terminal for output of the synchronizing signal that was separated in the synchronous separation circuit. This terminal is of the open collector system. Connect the pull-up resistor.		
37	DEF VCC	The terminal for VCC supply 9 V of DEF.	(Caution) Be sure to design the power supply so that when the power is Off, DEF VCC is below 1.9 V.	
38	Y/SYNC IN	The terminal for input of the synchronous separation circuit. Input via clamp capacitor.		
39	V SEP Filter	The terminal to be connected a capacitor for the Vertical synchronous separation circuit.		
40	AFC I Filter	Connect the filter for horizontal AFC I detection. The frequency of the horizontal output varies depending on the voltage at this pin.		

PIN No.	SYMBOL	FUNCTION	INTERFACE	I/O SIGNAL
41	32 fh VCO	Connect the ceramic oscillator for horizontal oscillation. The oscillator to be used is CSB503F30, made by Murata electronics.		
42	H Correction	The terminal to correct distortion of picture in the case of high-tension fluctuation. Input the AC component of high tension fluctuation. This terminal can be inputted VK output (Pin 12).		
43	DL OUT	The terminal outputs delayed Y signal. Input this signal to Y IN (Pin 54) via a capacitor.		
44	GND III	The terminal for GND of DEF linear / Chroma circuits.	—	
45	CHROMA IN	The terminal for the chroma input.		DC : 1.77 V AC : Burst 286 mV _{p-p}

PIN No.	SYMBOL	FUNCTION	INTERFACE	I/O SIGNAL
46	APC	The terminal to be connected APC filter. The oscillation frequency of VCXO varies depending on the voltage at this pin.		
47	B-Y OUT	The terminal outputs the B-Y signal.		DC : 2.2 V AC : 300m V _{p-p} (Rainbow color bar)
48	R-Y OUT	The terminal outputs the R-Y signal.		DC : 2.2 V AC : 300 mV _{p-p} (Rainbow color bar)
49	X'tal	The terminal to be connected with a 3.579545 MHz X'tal oscillator. The oscillated frequency, f_0 , is controlled by series capacitors, and frequency adjustment range can be expanded by putting capacitors in parallel.		
50	CW OUT	The terminal for CW output generated in VCXO.		

PIN No.	SYMBOL	FUNCTION	INTERFACE	I/O SIGNAL
51	V _{CC} (5 V)	The terminal for V _{CC} supply 5 V.	—	
52 53	R-Y IN B-Y IN	The terminals for the R-Y/B-Y signal input. Input signals clamped by coupling capacitors. (*)Even when not in use, connect to GND with a coupling capacitor.		
54	Y IN	The terminal for the Y signal input. Input the Y signals clamped by coupling capacitors.		
55	BLACK PEAK DET	The terminal to be connected the filter controlling the black stretching gain of the black stretching circuit. The black stretching gain varies depending on the voltage at this pin.		
56	DC RESTORATION CORR.	The terminal to be connected capacitor for DC restoration correction control. Open this pin if not use the DC restoration correction.

I²C BUS COMMUNICATIONS, RECEIVE METHOD

Start and stop condition

Bit transfer

Acknowledgement

Data receive format

When data are received, the master transmitter changes to a receiver immediately after the first acknowledgement and the slave receiver changes to a transmitter.

The master always creates the stop condition.

Details are provided in the Philips I²C specifications.

Option data transmit format

In the above method, the subaddresses are automatically incremented from the specified subaddress and data are set.

Purchase of TOSHIBA I²C components conveys license under the Philips I²C patent Rights to use these components in an I²C system, provided that the system conforms to the I²C standard specification as defined by Philips.

MAXIMUM RATINGS (Ta = 25°C)

CHARACTERISTICS	SYMBOL	RATING	UNIT
Power Supply Voltage (5 V / 9 V)	V _{CCmax}	7 / 12	V
Input Signal Voltage (5 V / 9 V)	e _{inmax}	5 / 9	V _{p-p}

① Set the bus control data to the preset value.

② Set SW54 to B (connect VCC (5V) to the Y input via a 20-kΩ resistor).

③ Measure #54 and #40 with an oscilloscope as shown in the diagram. Calculate TCL1 and TCL2.

① Set the bus control data to the preset value.

② Set SW54 to C (connect the Y input to AC-GND).

③ Set the unicolor to the center (100000), the brightness to the center (1000000), RGB cutoff to the center (1000000), the Y mute to OFF (0), and connect an external power supply to #54.

④ Increase the supply voltage from V54 and measure #13 (ROUT).

⑤ When the #13 voltage stops changing, substitute the supply voltage (V) in the formula below and calculate DR54.

$DR54 = V - V54$

(Note 1) : When testing, see the picture sharpness test circuit diagram.

(Note 2) : Ensure the composite signal is always input to pin 38 (SYNC IN).

② Input signal C-2

③ Input signal C-3

Fig.C Test signals for TA1310N chroma, color difference, and Y stage

Fig.T-1 Test signals for TA1310N text stage

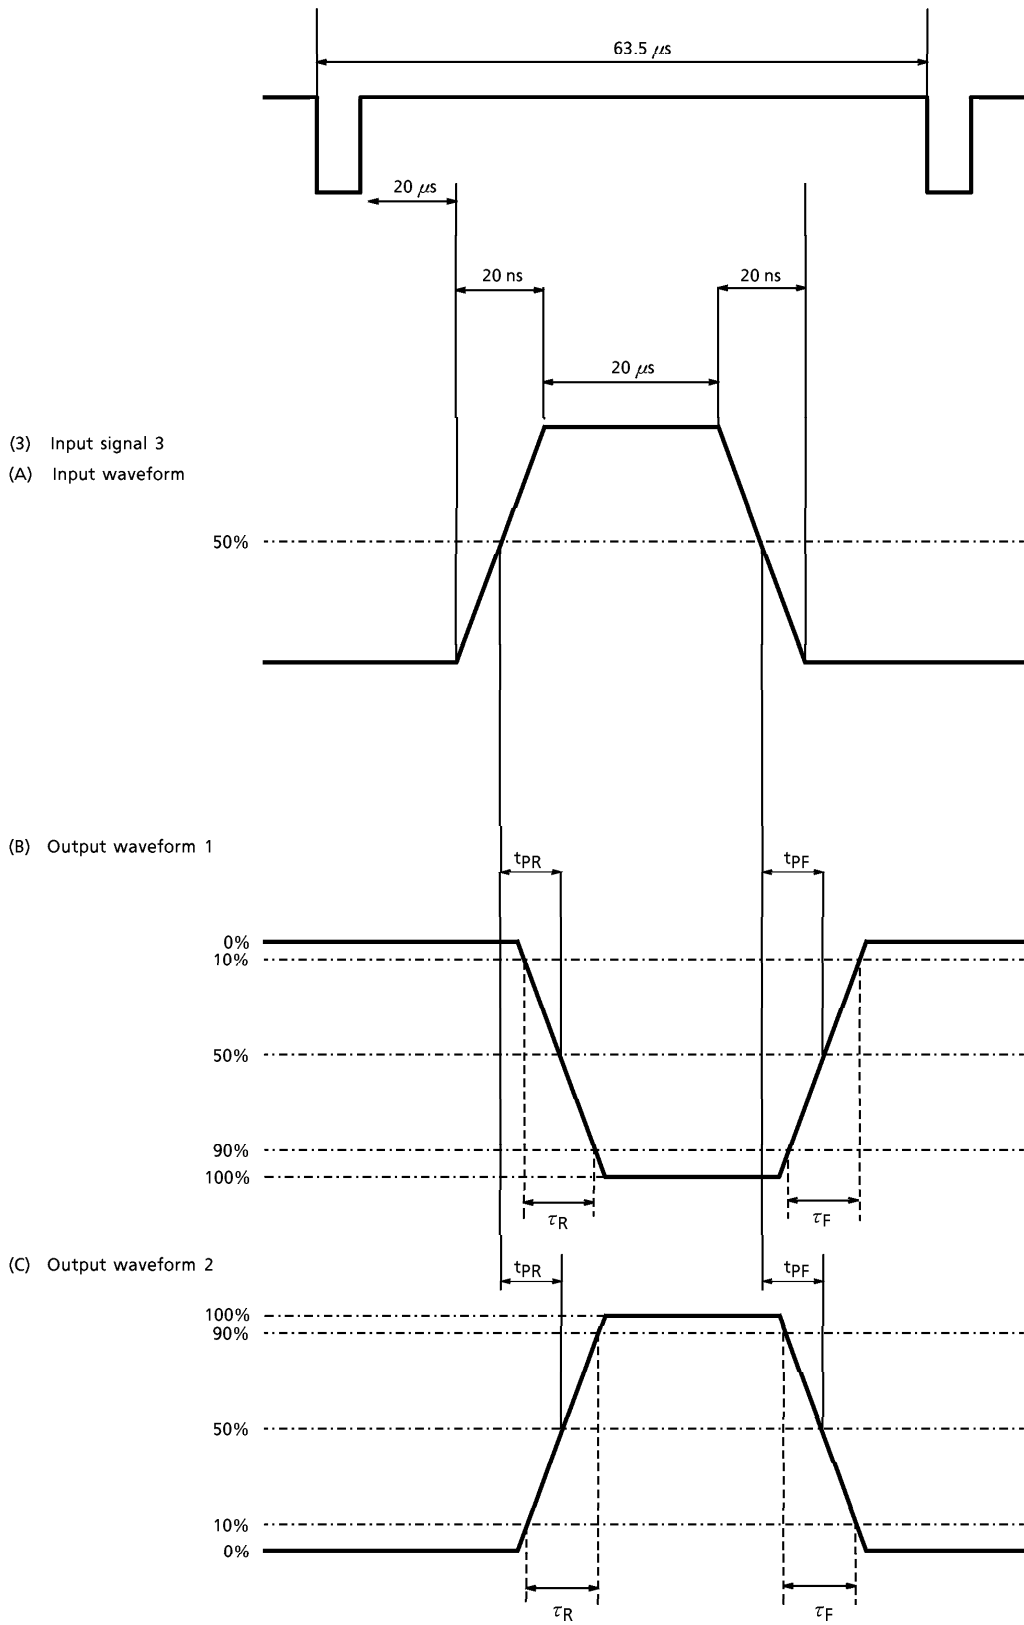

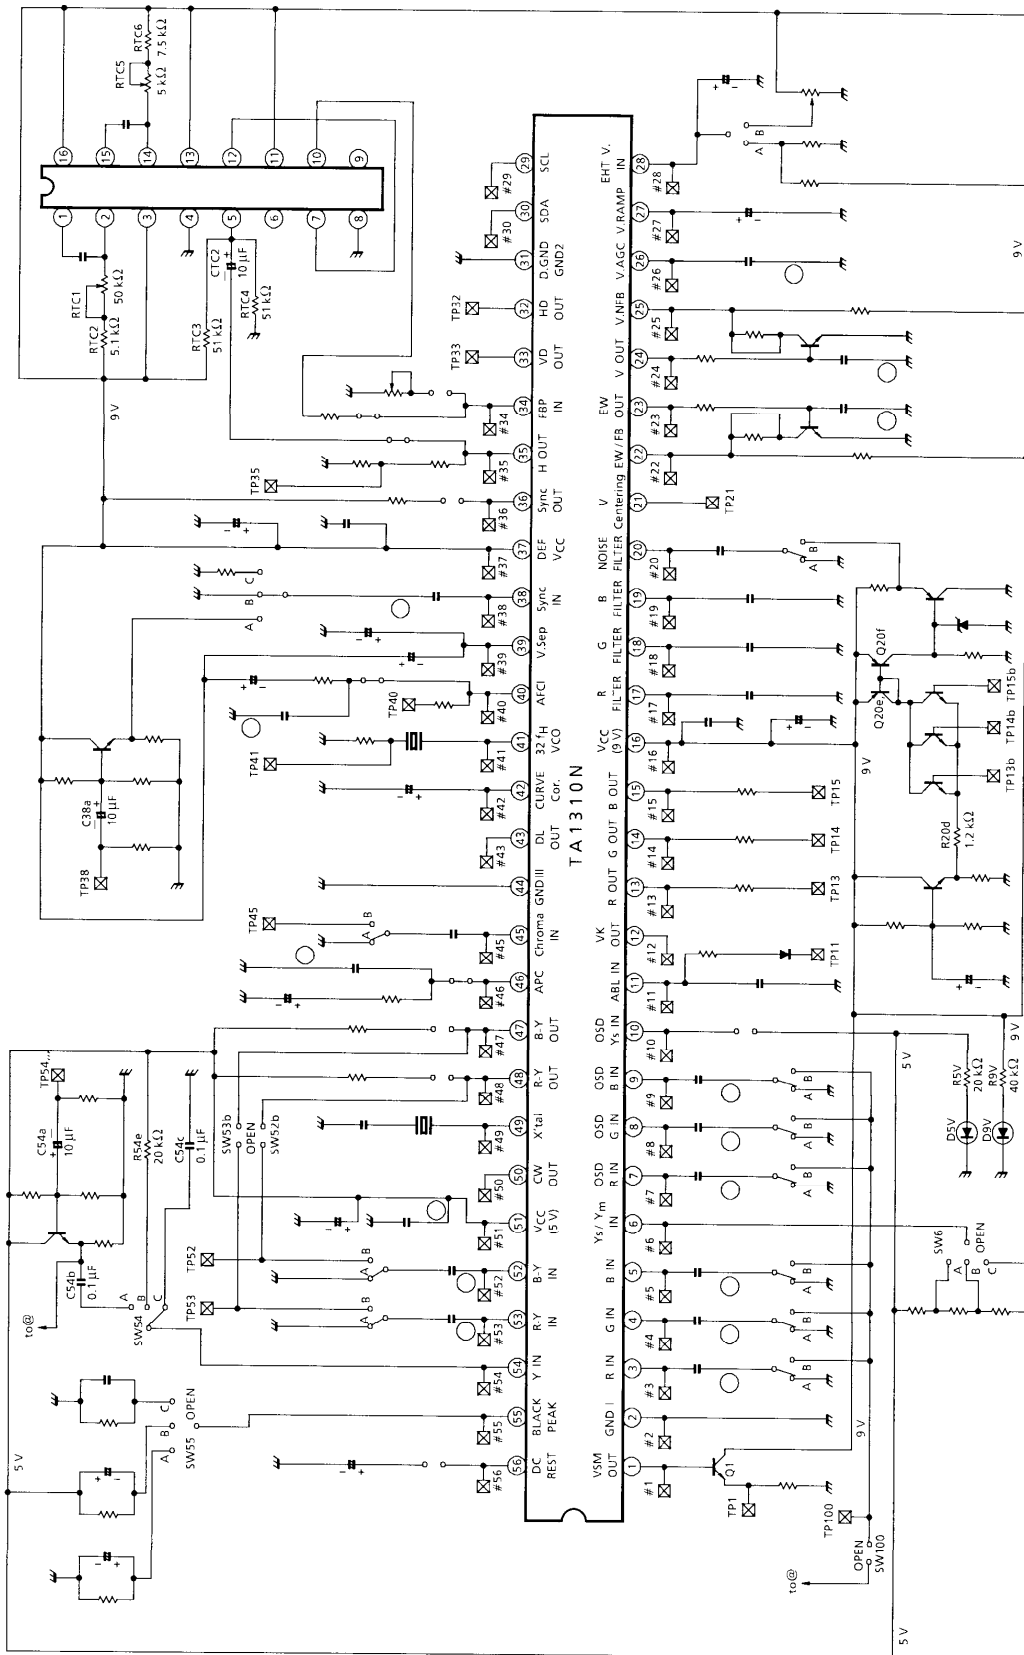

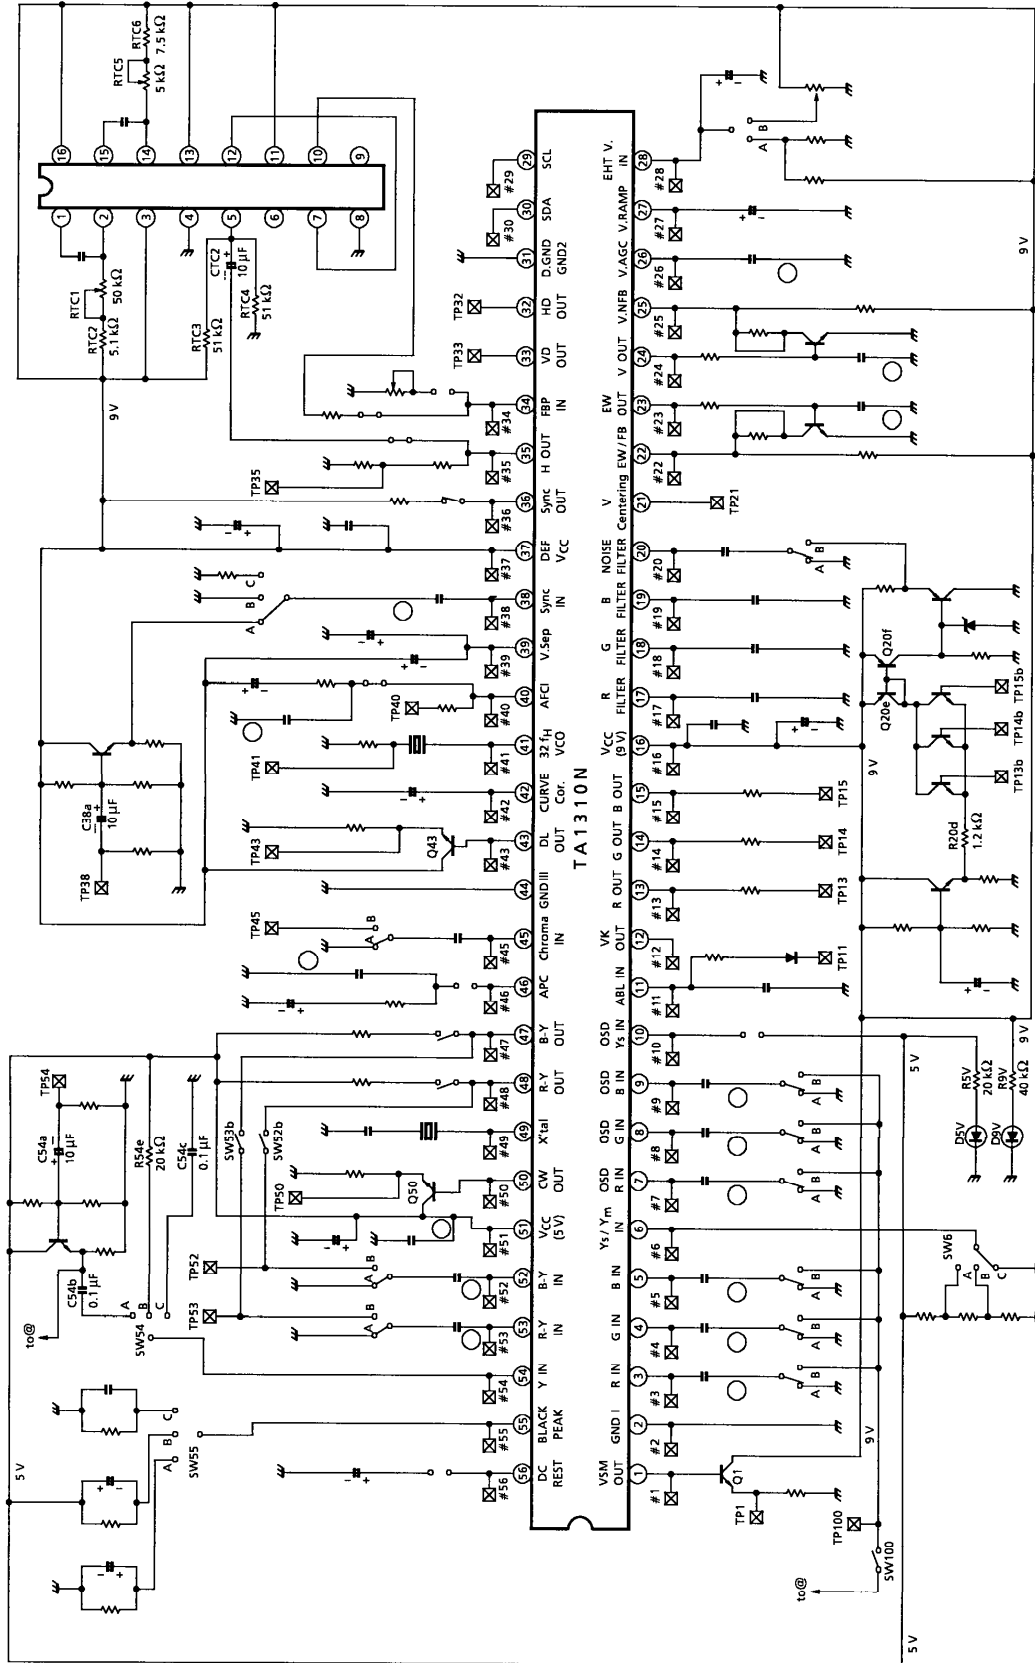

Fig.T-2 Test pulses for TA1310N test stage

TEST CIRCUIT
DC

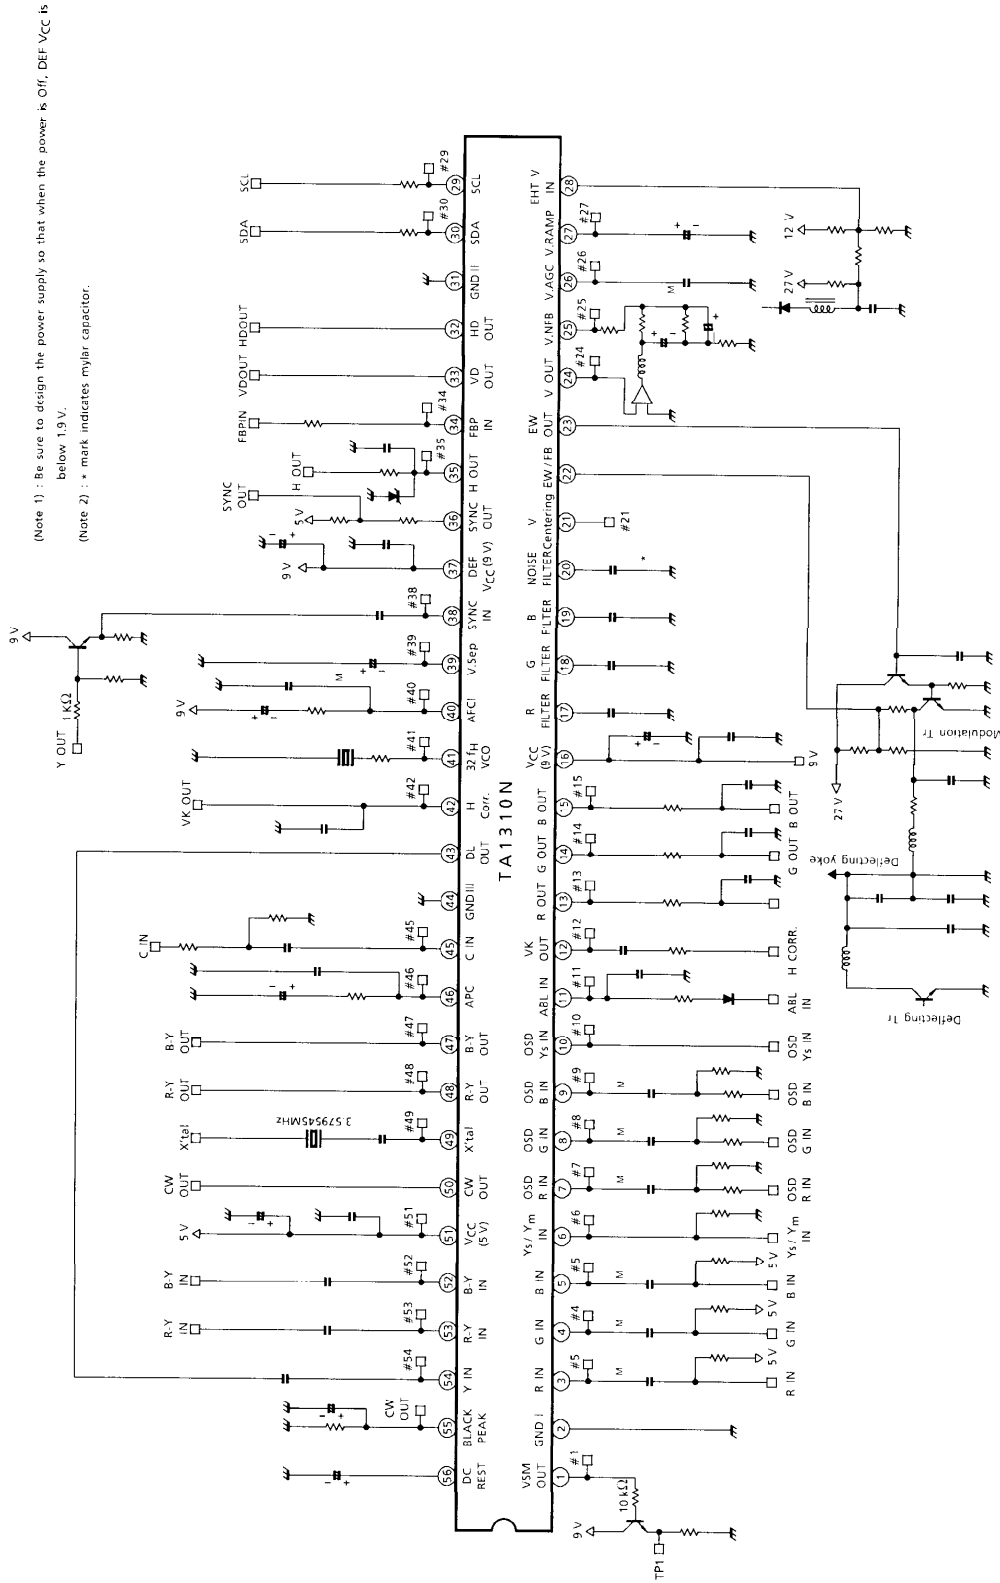

TA1310N

TEST CIRCUIT
AC characteristics for picture sharpness stage

APPLICATION CIRCUIT

(Note 1) : Be sure to design the power supply so that when the power is Off, DEF VCC is below 1.5 V.
 (Note 2) : * mark indicates mylar capacitor.

PACKAGE DIMENSIONS
SDIP56-P-600-1.78

Unit : mm

Weight : 5.55 g (Typ.)
