SILICON PNP RING EMITTER TRANSISTOR (RET)

September 1979

The 2SA1043/2SA1044 are silicon PNP general purpose, high power switching transistors fabricated with Fujitsu's unique Ring Emitter Transistor (RET) technology. RET devices are constructed with multiple emitters connected through diffused ballast resistors which provide uniform current density. This structure permits the design of high power transistors with exceptional switching characteristics and frequency response in high current applications.

The 2SA1043/2SA1044 are especially well-suited for switching regulators, DC to DC converters, power amplifiers or other applications where large SOA is required. NPN complements, 2SC2433/2SC2434, are available.

- Ultra-fast switching speed at 15A
 $t_r = 0.10 \mu s$ type
 $t_{off} = 0.20 \mu s$ typ
- Improved Reverse Second-Breakdown Capability
- Excellent Safe Operating Area
- High $f_T = 60$ MHz (typ)
