

### Applications

- Five-Independent Transistors
  - Three NPN and
  - Two PNP
- Differential Amplifiers
- DC Amplifiers
- Sense Amplifiers
- Level Shifters
- Timers
- Lamp and Relay Drivers
- Thyristor Firing Circuits
- Temperature Compensated Amplifiers
- Operational Amplifiers

### Description

The CA3096C, CA3096, and CA3096A are general purpose high voltage silicon transistor arrays. Each array consists of five independent transistors (two PNP and three NPN types) on a common substrate, which has a separate connection. Independent connections for each transistor permit maximum flexibility in circuit design.

Types CA3096A, CA3096, and CA3096C are identical, except that the CA3096A specifications include parameter matching and greater stringency in  $I_{CBO}$ ,  $I_{CEO}$ , and  $V_{CE(SAT)}$ . The CA3096C is a relaxed version of the CA3096.

### CA3096, CA3096A, CA3096C

#### Essential Differences

| CHARACTERISTIC          | CA3096A | CA3096  | CA3096C |
|-------------------------|---------|---------|---------|
| $V_{(BR)CEO}$ (V) (Min) |         |         |         |
| NPN                     | 35      | 35      | 24      |
| PNP                     | -40     | -40     | -24     |
| $V_{(BR)CBO}$ (V) (Min) |         |         |         |
| NPN                     | 45      | 45      | 30      |
| PNP                     | -40     | -40     | -24     |
| $h_{FE}$ at 1mA         |         |         |         |
| NPN                     | 150-500 | 150-500 | 100-670 |
| PNP                     | 20-200  | 20-200  | 15-200  |
| $h_{FE}$ at 100μA       |         |         |         |
| PNP                     | 40-250  | 40-250  | 30-300  |
| $I_{CBO}$ (nA) (Max)    |         |         |         |
| NPN                     | 40      | 100     | 100     |
| PNP                     | -40     | -100    | -100    |
| $I_{CEO}$ (nA) (Max)    |         |         |         |

## Operating Conditions

Temperature Range ..... -55°C to 125°C

## Thermal Information

|                                                     |                      |
|-----------------------------------------------------|----------------------|
| Thermal Resistance (Typical, Note 2)                | $\theta_{JA}$ (°C/W) |
| PDIP Package                                        | 90                   |
| SOIC Package                                        | 125                  |
| Maximum Power Dissipation (Each Transistor, Note 3) | 200mW                |
| Maximum Junction Temperature (Plastic Package)      | 150°C                |
| Maximum Storage Temperature Range                   | -65°C to 150°C       |
| Maximum Lead Temperature (Soldering 10s)            | 300°C                |
| (SOIC - Lead Tips Only)                             |                      |

**CAUTION:** Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

## NOTES:

1. The collector of each transistor of the CA3096 is isolated from the substrate by an integral diode. The substrate (Terminal 16) must be connected to the most negative point in the external circuit to maintain isolation between transistors and to provide for normal transistor action.
2.  $\theta_{JA}$  is measured with the component mounted on an evaluation PC board in free air.
3. Care must be taken to avoid exceeding the maximum junction temperature. Use the total power dissipation (all transistors) and thermal resistances to calculate the junction temperature.

## Electrical Specifications For Equipment Design, At $T_A = 25^\circ\text{C}$

**Metallization Mask Layout**

Dimensions in parentheses are in millimeters and are derived from the basic inch dimensions as indicated. Grid graduations are in mils ( $10^{-3}$  inch).

The photographs and dimensions represent a chip when it is part of the wafer. When the wafer is cut into chips, the cleavage angles are 57 degrees instead of 90 degrees with respect to the face of the chip. Therefore, the isolated chip is actually 7mils (0.17mm) larger in both dimensions.

**Dual-In-Line Plastic Packages (PDIP)****NOTES:**

1. Controlling Dimensions: INCH. In case of conflict between English and Metric dimensions, the inch dimensions control.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication No. 95.
4. Dimensions A, A1 and L are measured with the package seated in JEDEC seating plane gauge GS-3.
5. D, D1, and E1 dimensions do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 inch (0.25mm).
6. E and  $e_A$  are measured with the leads constrained to be perpendicular to datum  $-C-$ .
7.  $e_B$  and  $e_C$  are measured at the lead tips with the leads unconstrained.  $e_C$  must be zero or greater.
8. B1 maximum dimensions do not include dambar protrusions. Dambar protrusions shall not exceed 0.010 inch (0.25mm).
9. N is the maximum number of terminal positions.
10. Corner leads (1, N, N/2 and N/2 + 1) for E8.3, E16.3, E18.3, E28.3, E42.6 will have a B1 dimension of 0.030 - 0.045 inch (0.76 - 1.14mm).

## Small Outline Plastic Packages (SOIC)

### NOTES:

1. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
4. Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
6. "L" is the length of terminal for soldering to a substrate.
7. "N" is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. The lead width "B", as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
10. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
