

SLA3001M/3002M/3004M

3-Output Dropper/Switching Type

■Features

- 3 regulator ICs combined in 1 package
- Insulated single inline package
- Can be used with dropper type and switching type
- 3 independent circuits for input and output respectively. Internal dissipation can be reduced since different input voltages can be applied.
- Dropper type regulator IC is low-dropout voltage type with input/output voltage difference of 1V. Output ON/OFF control, variable output voltage (rise only) function
- Switching type: built-in separate excitation (60kHz), high efficiency of 80% or over
- Each regulator has overcurrent protection and thermal protection circuit.

■Applications

- For stabilization of the secondary stage of switching power supplies
- Electronic equipment

■Lineup

Part Number	SLA3001M			SLA3002M			SLA3004M		
	Type	V _O (V)	I _O (A)	Type	V _O (V)	I _O (A)	Type	V _O (V)	I _O (A)
Regulator 1	Dropper	12	1.5	Switching	5	0.5	Switching	5	0.5
Regulator 2	Dropper	5	1.5	Dropper	15.7	1.0	Switching	9	0.4
Regulator 3	Dropper	9	1.5	Switching	9	0.4	Switching	9	0.4

■Absolute Maximum Ratings

Parameter	Symbol	Ratings									Unit
		SLA3001M			SLA3002M			SLA3004M			
		Reg1	Reg2	Reg3	Reg1	Reg2	Reg3	Reg1	Reg2	Reg3	
DC Input Voltage	V _{IN}	35			35			35			V

*1: I_{S1} of Dropper Type is specified at –5(%) drop point of output voltage V_O. I_{S1} of Switching Type is specified at –10(%) drop point of output voltage V_O.

*2: Output is ON when V_C terminal is open.

■Outline Drawing

a : Part Number
b : Lot Number

Forming No. LF861

■Block Diagram

■Standard External Circuit

■Selecting External components for dropper type regulator

Input capacitor (Approx. 47 μ F)

Output capacitor (Approx. 47 to 100 μ F)

- Low ESR capacitors are recommended for input and output when using them in low temperature conditions (0°C or less)

■Selecting External components for switching type regulator

Input capacitor (Approx. 100 μ F)

Output smoothing capacitor (Approx. 330 μ F)

- Input capacitor and output capacitor must satisfy allowable ripple current.
- Low ESR capacitors are recommended for reducing output ripple voltage.
- Low ESR capacitors are recommended for input and output when using them in low temperature conditions (0°C or less)

Choke coil (200 μ H when V_o is 3.3V or 5V, 300 μ H when V_o is not 3.3V or 5V)

- When its winding resistance is high, its efficiency may decrease and the rated value may not be achieved.
- Pay attention to heat from the choke coil due to magnetic saturation caused by overload, short circuit of load, etc. because the overcurrent protection starting current is approx. 1A.

Flywheel diode (Sanken AK04 recommended)

- Use a Schottky barrier diode for D₁, D₂ and D₃ and make sure that the reverse voltage applied to SW output terminal does not exceed the value (–1V) given in the maximum ratings.
- If you use a fast recovery diode or any other diode, application of a reverse voltage generated from the recovery or ON voltage of the diode may damage the IC.

Typical Characteristics

($T_a=25^\circ\text{C}$)

SLA3001M (Regulator 2, $V_o=5\text{V}$)

Note on Thermal Protection:

The thermal protection circuit is intended for protection against heat during instantaneous short-circuiting. Its operation is not guaranteed for short-circuiting over extended periods of time.

SLA3002M/SLA3004M (Regulator 1, $V_o=5\text{V}$)
