

**ADVANCED 2-HEAD  
PLAY-BACK AND RECORD AMPLIFIER FOR VCR**

**PLAY-BACK MODE**

- LOW NOISE AND WIDE BAND AMPLIFIERS FOR 2 HEADS
- AUTOMATIC OFFSET CANCELLATION BETWEEN THE 2 SELECTED HEADS
- ONE PLAY-BACK OUTPUT WITHOUT AGC
- ONE PLAY-BACK OUTPUT INCLUDING AGC
- RECORD AMPLIFIER INHIBITION AND RECORD OUTPUT GROUNDED
- OUTPUT FOR TRACKING VIDEO INFORMATION (TRIV) WITH ADJUSTABLE GAIN

**RECORD MODE**

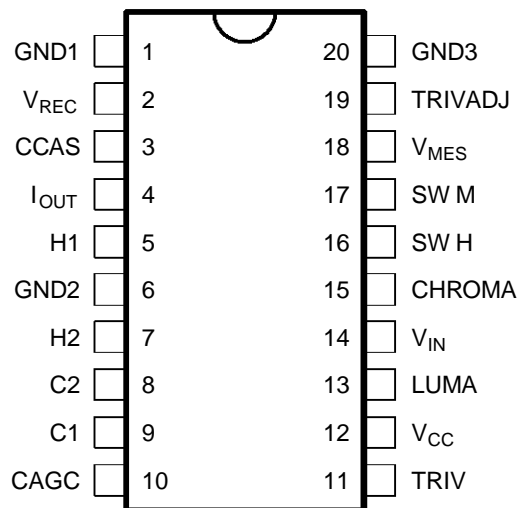

- ONE INTEGRATED I/I CONVERTER WITH ACCURATE CONTROL OF TRANSCONDUCTANCE
- AUTOMATIC PLAY-BACK/RECORD SWITCHING BY SCANNING OF RECORD SUPPLY
- PLAY-BACK LOOP INHIBITION

**SO20 LARGE**

**PIN DESCRIPTION**

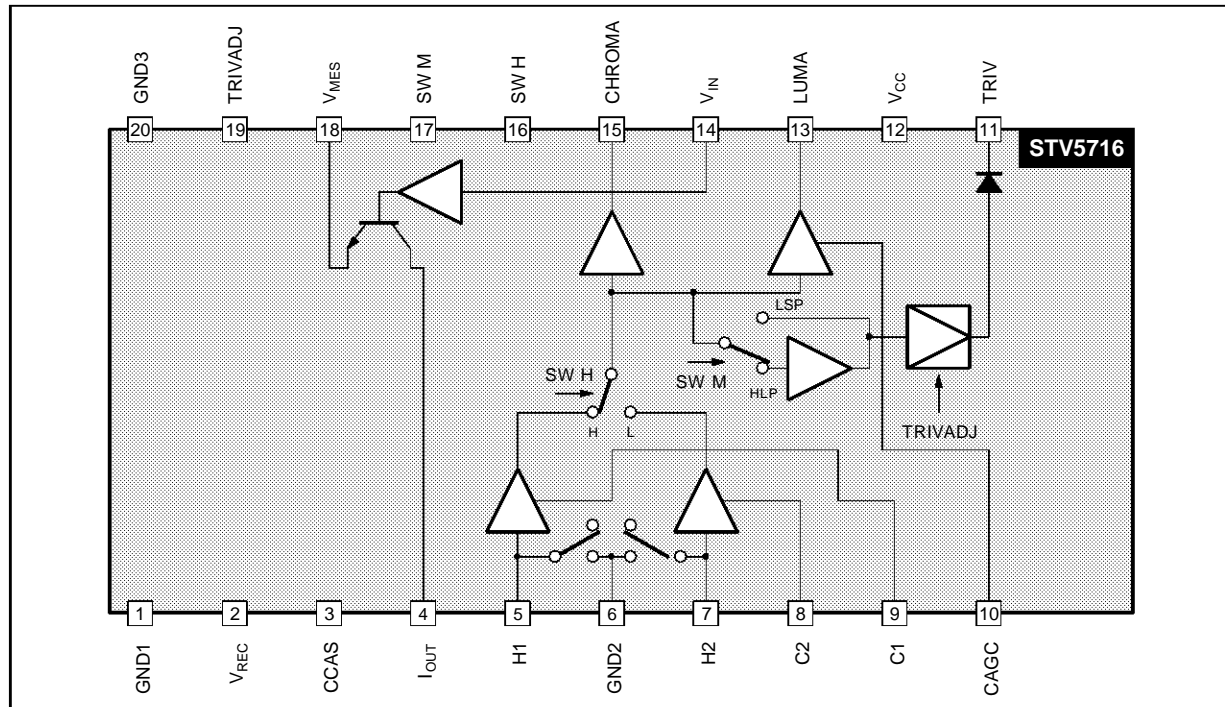

**DESCRIPTION**

The STV5716 is an advanced two head record and play-back amplifier for VCR.

**FUNCTIONAL DESCRIPTION**

STV5716 is intended for 2 heads VCR applications. It includes all the electrical functions necessary to achieve play-back and record processing for VHS and S-VHS applications (10MHz bandwidth).

High performance technology allows very low noise levels (current and voltage), which are frequency independant in all the frequency range. In play-back mode a special feature suppresses the DC offset when switching the two channels. Optimized play-back output stage gives to the STV5716 large capability to drive directly a coaxial cable in order to reduce number of external components.

Two play-back outputs are available : one, dedicated to Chroma processing, is a 60dB voltage amplifier output, the other, dedicated to Luma processing, is phase opposite signal with a constant AC output level of 200mV<sub>PP</sub> at 3.8MHz signal.

A tracking information for video signal (TRIV) is Luma amplitude proportional and allows automatic

phase correction. The transfer function has a gain of 2.5dB higher when a LP channel is selected. Adding to this, a gain control bloc allows to modify the gain ( $\pm 6$ dB) of the TRIV function for all the channels by applying a bias on pin TRIVADJ.

An automatic scanning of record supply voltage permits STV5716 automatically switching either in play-back or in record mode. The switching threshold voltage is fixed to a value which forbids high current peaking through the heads.

During play-back mode, record output is grounded via an internal transistor and during record mode preamplifiers are turned off.

There is one output current for two recording heads, the DC current and the AC characteristics can be very precisely controlled with accurate external resistors. If recommended resistances are used, a  $\pm 3\%$  transconductance accuracy is guaranteed.

STV5716 is fully protected against ESD.

$V_{CC}$	42mA	52mA	25mA	38mA
$V_{REC}$	0mA	0mA	25mA	33mA

	$V_{CC} = 5.5V, V_{REC} = 9.45V$		521mW	

5716-04.TBL

Notes : 1.  $R1 = 18\Omega$ 

2. Taking in account only the consumption through the IC.

A great care should be taken to the maximum power consumption :  $V_{REC}$  can be increased to 12.6V if the DC current flowing through the head is reduced. This can be done by increasing R1 value.  $V_{REC}$  can be reduced as long as voltage on Pin  $I_{OUT}$  does not fall below 1V (to avoid output stage saturation).
