

IF DOWN CONVERTOR IC FOR DIGITAL CATV

DESCRIPTION

The μPC2798GR is a Silicon monolithic IC designed for use as QAM IF down convertor for digital CATV. This IC consists of AGC amplifier, mixer, oscillator, and video amplifier.

The package is 20 pins SSOP suitable for high-density surface mount.

FEATURES

- Low distortion AGC amplifier $IIP_3 = -9 \text{ dBm}$
- On chip IF convertor $f_{in} = 30 \text{ to } 250 \text{ MHz}$
- On chip video amplifier $V_{out} = 3.0 \text{ V}_{P-P}$ (differential, @ $R_L = 1k\Omega$)
- Supply voltage: 5 V
- Packaged in 20 pins SSOP suitable for high-density surface mount.

ORDERING INFORMATION

PART NUMBER	PACKAGE	PACKAGE STYLE
μPC2798GR-E1	20 pins plastic SSOP (225 mil)	Embossed tape 12 mm wide. 2.5 k/REEL. Pin 1 indicates pull-out direction of tape

*: For evaluation sample order, please contact your local NEC office.

(Part number for sample order: μPC2798GR)

Please refer to "Quality grade on NEC Semiconductor Devices" (Document number C11531E) published by NEC Corporation to know the specification of quality grade on the devices and its recommended applications.

Caution electro-static sensitive device

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.
Not all devices/types available in every country. Please check with local NEC representative for availability and additional information.

INTERNAL BLOCK DIAGRAM AND PIN CONFIGURATION (Top View)

PIN EXPLANATIONS

Pin No.	Symbol	Pin Voltage (V, TYP.)	Explanation	Equivalent Circuit
1	AGC IN1	1.5	Input pin of IF signal. 1pin is same phase and 2pin is opposite phase at balance input. In case of single input, 1pin or 2pin should be grounded through capacitor.	
2	AGC IN2	1.5		
3	V _{AGC}	0 to 5	Automatic gain control pin. This pin's bias govern the AGC output level. Minimum gain at V _{AGC} = 0 V Maximum gain at V _{AGC} = 5 V Recommend to use by deviding AGC voltage with externally resistor (ex. 100 kΩ).	
4	Vcc1	5.0	Power supply pin of IF down convertor block. Must be connected bypass capacitor to minimize ground impedance.	
5	OSC OUT	4.0	Output pin of Oscillator frequency. Connected to PLL synthesizer IC's input pin.	
6	GND	0.0	Ground pin. Must be connected to the system ground with minimum inductance. Ground pattern on the board should be formed as wide as possible.	
7	OSC B2	2.4	Internal oscillator consist in balance amplifier. 7 and 8pins, 9 and 10 pins should be externally connected to oscillate with active feedback loop. Connected LC resonator between 7pin and 10pin.	
8	OSC C1	4.6		
9	OSC C2	4.6		
10	OSC B1	2.4		

PIN EXPLANATIONS

Pin No.	Symbol	Pin Voltage (V, TYP.) () is value at Vcc2 = 9 V.	Explanation	Equivalent Circuit
11	OUT2	2.5 (4.7)	Output pin of video amplifier. In case of $R_L = 1\text{ k}\Omega$, differential output voltage equal 3 V _{P-P} . OUT1 and INA are same phase. OUT2 and INB are same phase.	
11	OUT1	2.5 (4.7)		
13	Vcc2	5 to 9	Power supply pin of video amplifier. Must be connected bypass capacitor to minimize ground impedance.	
14	INB	2.5 (4.1)	Signal input pin of video amplifier. This pin is high impedance.	
15	INA	2.5 (4.1)		
16	G1B	1.7 (3.3)	Gain control pin of video amplifier. Maximum gain at G1A-G1B = short. Minimum gain at G1A-G1B = open. Gain is able to adjust by inserting arbitrary resistor between 16pin and 17pin.	
17	G1A	1.7 (3.3)		
18	MIX OUT1	3.7	Output pin of mixer. This output pin features low-impedance because of its emitter-follower output port.	
19	MIX OUT2	3.7		
20	GND	0.0	Ground pin. Must be connected to the system ground with minimum inductance. Ground pattern on the board should be formed as wide as possible.	

ABSOLUTE MAXIMUM RATINGS ($T_A = 25\text{ }^{\circ}\text{C}$ unless otherwise specified)

PARAMETER	SYMBOL	RATING	UNIT	TEST CONDITIONS
Supply Voltage 1	Vcc1	6.0	V	Mixer block
Supply Voltage 2	Vcc2	6.0	V	Video Amp block
Power Dissipation	P _D	430	mW	$T_A = 85\text{ }^{\circ}\text{C}^{-1}$
Operating Ambient Temperature	T _A	-40 to +85	$^{\circ}\text{C}$	
Storage Temperature	T _{stg}	-55 to +150	$^{\circ}\text{C}$	

PARAMETER	SYMBOL	RATING	UNIT	TEST CONDITIONS
Supply Voltage 1	Vcc1	6.0	V	Mixer block
Supply Voltage 2	Vcc2	11.0	V	Video Amp block
Power Dissipation	P _D	500	mW	$T_A = 75\text{ }^{\circ}\text{C}^{-1}$
Operating Ambient Temperature	T _A	-40 to +75	$^{\circ}\text{C}$	
Storage Temperature	T _{stg}	-55 to +150	$^{\circ}\text{C}$	

*1. Mounted on 50 × 50 × 1.6 mm double copper epoxy glass board.

RECOMMENDED OPERATING RANGE

PARAMETER	SYMBOL	MIN.	TYP.	MAX.	UNIT
Supply Voltage 1	Vcc1	4.5	5.0	5.5	V
Supply Voltage 2	Vcc2	4.5	5.0	10.0	V
Operating Ambient Temperature 1 ^{*2}	T _{A1}	-40	+25	+85	$^{\circ}\text{C}$
Operating Ambient Temperature 2 ^{*3}	T _{A2}	-40	+25	+75	$^{\circ}\text{C}$

*2. @Vcc1 = Vcc2 = 4.5 to 5.5 V

*3. @Vcc1 = 4.5 to 5.5 V, Vcc2 = 4.5 to 10.0 V

ELECTRICAL CHARACTERISTICS ($T_A = 25\text{ }^{\circ}\text{C}$)

PARAMETER	SYMBOL	MIN.	TYP.	MAX.	UNIT	TEST CONDITIONS

APPLICATION CIRCUIT EXAMPLE

Cv: N ratio = 10 to 11 (ex. HVU 200 A)

The application circuits and their parameters are for reference only and are not intended for use in actual design-ins.

ILLUSTRATION OF THE APPLICATION CIRCUIT ASSEMBLED ON EVALUATION BOARD

Notes

- *1) R is resistance to control video amplifier gain. (short to open)
- *2) Cv is variable capacitor. (N ratio = 10 to 11, Example: HVU200A)
- *3) ○○ shows through holes
- *4)  pattern should be removed on this application

PACKAGE DIMENSIONS

★ 20 PIN PLASTIC SSOP (225 mil) (UNIT: mm)

detail of lead end

NOTE Each lead centerline is located within 0.10 mm of its true position (T.P.) at maximum material condition.

RECOMMENDED SOLDERING CONDITIONS

The following conditions (see table below) must be met when soldering this product.

Please consult with our sales officers in case other soldering process is used or in case soldering is done under different conditions.

For details of recommended soldering conditions for surface mounting, refer to information document **SEMICONDUCTOR DEVICE MOUNTING TECHNOLOGY MANUAL (C10535E)**.

μPC2798GR

Soldering process	Soldering conditions	Symbol
Infrared ray reflow	Peak package's surface temperature: 235 °C or below, Reflow time: 30 seconds or below (210 °C or higher), Number of reflow process: 3, Exposure limit ^{Note} : None	IR35-00-3
VPS	Peak package's surface temperature: 215 °C or below, Reflow time: 40 seconds or below (200 °C or higher), Number of reflow process: 3, Exposure limit ^{Note} : None	VP15-00-3
Partial heating method	Terminal temperature: 300 °C or below, Flow time: 3 seconds or below, Exposure limit ^{Note} : None	

Note Exposure limit before soldering after dry-pack package is opened.

Storage conditions: 25 °C and relative humidity at 65% or less.

Caution Do not apply more than single process at once, except for "Partial heating method".

- **The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.**
 - No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.
 - NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.
 - Descriptions of circuits, software, and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software, and information in the design of the customer's equipment shall be done under the full responsibility of the customer. NEC Corporation assumes no responsibility for any losses incurred by the customer or third parties arising from the use of these circuits, software, and information.
 - While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.
 - NEC devices are classified into the following three quality grades:
"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.
 - Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
 - Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
 - Specific: Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.
- The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.
