

GaAs MMIC

CGY 21

- Two-stage monolithic microwave IC (MMIC amplifier)
- All gold metallization
- Chip fully passivated
- Operating voltage range: 3 to 6 V
- 50Ω input/output; $RL_{IN} RL_{OUT} > 10 \text{ dB}$
- Gain: 21 dB at 500 MHz
- Low noise figure: 3.9 dB at 500 MHz
- Bandwidth: 2 GHz
- Hermetically sealed package

ESD: Electrostatic discharge sensitive device, observe handling precautions!

Maximum Ratings

Parameter	Symbol	Values	Unit
Supply voltage, $T_c \leq 80 \text{ }^\circ\text{C}$	V_S	6	V
Total power dissipation, $T_c \leq 50 \text{ }^\circ\text{C}$	P_{tot}	2	W
Channel temperature	T_{ch}	150	°C
Storage temperature range	T_{stg}	- 55 ... + 150	

Thermal Resistance

Channel - case	R_{thchC}	50	K/W
----------------	--------------------	----	-----

Note: Exceeding any of the maximum ratings may cause permanent damage to the device. Appropriate handling procedures are required to protect the electrostatic sensitive IC against degradation due to excess voltage or excess current spikes. Excellent ground connection of lead 4 and the package (e. g. soldered on microstripline laminate) is required to achieve guaranteed RF performance and stable operation conditions and provides adequate heat sink. Low parasitic capacitance of the bias network to port 2 gives optimum gain and flatness. Input and output connections must be DC isolated by coupling capacitors.

Electrical Characteristics

at $T_A = 25\text{ °C}$, $V_S = 4.5\text{ V}$, $R_S = R_L = 50\text{ }\Omega$, unless otherwise specified,
(for application circuit see next page).
