

DM54181 Arithmetic Logic Unit/Function Generators

General Description

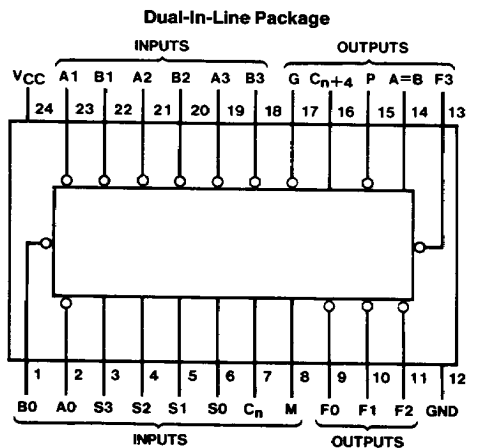

These arithmetic logic units (ALU)/function generators perform 16 binary arithmetic operations on two 4-bit words, as shown in Tables I and II. These operations are selected by the four function-select lines (S0, S1, S2, S3) and include addition, subtraction, decrement, and straight transfer. When performing arithmetic manipulations, the internal carries must be enabled by applying a low-level voltage to the mode control input (M). A full carry look-ahead scheme is available in these devices for fast, simultaneous carry generation by means of two cascade-outputs (P and G) for the four bits in the package. When used in conjunction with the DM54S182 full carry look-ahead circuits, high-speed arithmetic operations can be performed. The typical addition times shown below illustrate how little time is required for addition of longer words, when full carry look-ahead is employed. The method of cascading 182 circuits with these ALU's to provide multi-level full carry look-ahead is illustrated under typical applications data for the DM54S182.

Features

- Arithmetic operating modes:
 - Addition
 - Subtraction
 - Shift operand A one position
 - Magnitude comparison
 - Plus twelve other arithmetic operations
- Logic function modes:
 - EXCLUSIVE-OR
 - Comparator
 - AND, NAND, OR, NOR
 - Plus ten other logic operations
- Full look-ahead for high-speed operations on long words

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Output Voltage (A = B Output)	5.5V
Operating Free Air Temperature Range DM54	-55°C to +125°C
Storage Temperature Range	-65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

General Description (Continued)

If high speed is not important, a ripple-carry input (C_n) and a ripple-carry output (C_{n+4}) are available. However, the ripple-carry delay has also been minimized so that arithmetic manipulations for small word lengths can be performed without external circuitry.

These circuits will accommodate active-high or active-low data, if the pin designations are interpreted as shown below.

Subtraction is accomplished by 1's complement addition, where the 1's complement of the subtrahend is generated internally. The resultant output is $A-B-1$, which requires an end-around or forced carry to provide $A-B$.

The 181 can also be utilized as a comparator. The $A = B$ output is internally decoded from the function outputs (F_0, F_1, F_2, F_3) so that when two words of equal magnitude are applied at the A and B inputs, it will assume a high level to indicate equality ($A = B$). The ALU should be in the subtract mode with $C_n = H$ when performing this comparison. The $A = B$ output is open-collector so that it can be wire-AND connected to give a comparison for more than four bits. The carry output (C_{n+4}) can also be used to supply

relative magnitude information. Again, the ALU should be placed in the subtract mode by placing the function select inputs S_3, S_2, S_1, S_0 at L, H, H, L, respectively.

These circuits have been designed to not only incorporate all of the designer's requirements for arithmetic operations, but also to provide 16 possible functions of two Boolean variables without the use of external circuitry. These logic functions are selected by use of the four function-select inputs (S_0, S_1, S_2, S_3) with the mode-control input (M) at a high level to disable the internal carry. The 16 logic functions are detailed in Tables 1 and 2 and include exclusive-OR, NAND, AND, NOR, and OR functions.

ALU SIGNAL DESIGNATIONS

The DM54181 can be used with the signal designations of either *Figure 1* or *Figure 2*.

The logic functions and arithmetic operations obtained with signal designations as in *Figure 1* are given in Table I; those obtained with the signal designations of *Figure 2* are given in Table II.
