3-state hex inverting buffer

HEF40098B buffers

DESCRIPTION

The HEF40098B is a hex inverting buffer with 3-state outputs. The 3-state outputs are controlled by two enable inputs ($\overline{EO}_4$ and $\overline{EO}_2$). A HIGH on $\overline{EO}_4$ causes four of the six buffer elements to assume a high impedance or OFF-state regardless of the other input conditions and a HIGH on $\overline{EO}_2$ causes the outputs of the remaining two buffer elements to assume a high impedance or OFF-state regardless of the other input conditions.
