

FDC6321C Dual N & P Channel , Digital FET

General Description

These dual N & P Channel logic level enhancement mode field effect transistors are produced using Fairchild's proprietary, high cell density, DMOS technology. This very high density process is especially tailored to minimize on-state resistance. This device has been designed especially for low voltage applications as a replacement for digital transistors in load switching applications. Since bias resistors are not required this dual digital FET can replace several digital transistors with different bias resistors.

Features

- N-Ch 25 V, 0.68 A, $R_{DS(ON)} = 0.45 \Omega @ V_{GS} = 4.5 V$
- P-Ch -25 V, -0.46 A, $R_{DS(ON)} = 1.1 \Omega @ V_{GS} = -4.5 V$.
- Very low level gate drive requirements allowing direct operation in 3 V circuits. $V_{GS(th)} < 1.0V$.
- Gate-Source Zener for ESD ruggedness. >6kV Human Body Model
- Replace multiple dual NPN & PNP digital transistors.
