

## Dolby\* B-C Type Noise Reduction System for Playback

### Description

The CXA2502M is a bipolar IC incorporating stereo Dolby B-C type noise reduction (NR) system for playback.

Pins of this IC are compatible with those of the Dolby B type NR ICs CXA1102M/ CXA1552M.

A reduction in the number of external parts and small package have been achieved due to the fact that the spectral skewing circuits are all on-chip and this IC is intended for playback.

16 pin SOP (Plastic)

### Features

- Few external parts
- Spectral skewing circuit are on-chip
- NR OFF/B/C and AUX/TAPE switches
- Small package (16-pin SOP)
- Low current consumption 12mA Typ.
- Built-in two channels

### Structure

Bipolar silicon monolithic IC

## Application Note

The CXA2502M is a stereo Dolby B-C type NR IC like the CXA1560 series.

Few external parts and smaller package can be achieved because this IC has a built-in spectral skewing circuit and the reduced number of pins for playback.

### 1) Power Supply

The CXA2502M is designed to operate on either single or dual power supply.

For dual power supply, connect VCT pin to GND, and GND pin to the negative power supply.

For single power supply, connect GND pin to GND.  $V_{CC}/2$ , generated from the internal circuit, is output to VCT pin.

Connect a by-pass capacitor between this pin and GND.

The operating voltage range is 7.0 to 16V, which satisfies the signal handling of 12dB specified by the Dolby Laboratories.

### 2) Operation Mode Control

The CXA2502M has built-in electronic switches. The operations are controlled by the DC voltages of NRSW and MODE control pins. Table 1 shows the switching truth tables.

For single power supply, VH, VM and VL correspond to  $V_{CC}$ ,  $V_{CC}/2$  and GND, respectively.

For dual power supply, VH, VM and VL correspond to  $V_{CC}$ , GND and  $V_{EE}$ , respectively.

Refer to "threshold" on the characteristics graph for the thresholds of the control voltages. NRSW and MODE control pins are connected to VCT via a 50k $\Omega$  resistor, so when the pin is open, VM condition results.

	VH	VM	VL
NRSW	C type	B type	NR OFF
MODE	→	TAPE	AUX

**Table 1**

### 3) Reference level

The CXA2502M Dolby level is -6dBm (388mVrms). The reference level of the playback input pin (PB IN) is defined as the levels which provide the line output level to the line output pin (LINE OUT) in NR OFF mode.
