

AN6477FBP

Speech Network IC Incorporating Cross-Point Switch

■ Overview

The AN6477FBP is a speech network IC which includes a transmitter/receiver noise reducing function and is suitable for quality cordless telephones. It incorporates a cross-point switch controlled by serial input. It allows speech path switching and mixing, and provides for three- or four-person communication and other sophisticated functions. It also incorporates REC/PLAY amplifiers with VOX circuits.

■ Features

- The speech block can operate on line voltage, with no external power supply, and is operational even during a commercial power failure.
- Incorporates a transmitter/receiver noise reducing function to improve the handset's howling margin (transmitter noise reduction can be turned ON and OFF from outside).
- Incorporates auto. PAD, dial mute, DC voltage regulation, and other basic speech functions.
- The cross-point switch can be operated independently.
- Each output of the cross-point switch can correspond to multiple inputs, allowing three- or four-person communication.
- The REC/PLAY amplifiers incorporate ALC and VOX circuits.
- Receiver volume can be increased by 6dB or 9dB.

Basic block diagrams

Time Charts (assuming the address h26 latch is to be set)

1. Data is read into the shift register in synchronization with a rising edge of the clock, with the higher data being shifted sequentially on a first-come highest-bit basis.
2. When the strobe is low, data is shifted sequentially on the shift register in synchronization with the clock. Data on the latch circuit will not change.
3. When the strobe goes high, the latched data whose address is represented by the highest six bits of the shift register is updated. Latched data is set when the least significant bit is 1, and reset when the bit is 0.
4. Referring to 3 above, if the address is h00 (the highest six bits of the shift register are all 0s), the latch circuit is cleared (all reset) regardless of the data content.
5. At power-on (V_{CC} ON), the latch circuit is cleared (by power-ON reset).

Logic Circuits Address Specifications

1. Cross-point switch

Output Input	Handset rec.	Line output	Loudspeaker	Intercom	RF1	RF2	Recording	Time stamp
Loudspeaker			02					
Microphone		09	0A	0B	0C	0D	0E	
Receiver	10		12		14	15	16	
Intercom	18		1A		1C	1D	1E	
RF1	20	21		23		25	26	
RF2	28	29		2B	2C		2E	
MIX	30	31	32	33	34	35		37
AUX	38	39	3A	3B	3C	3D	3E	

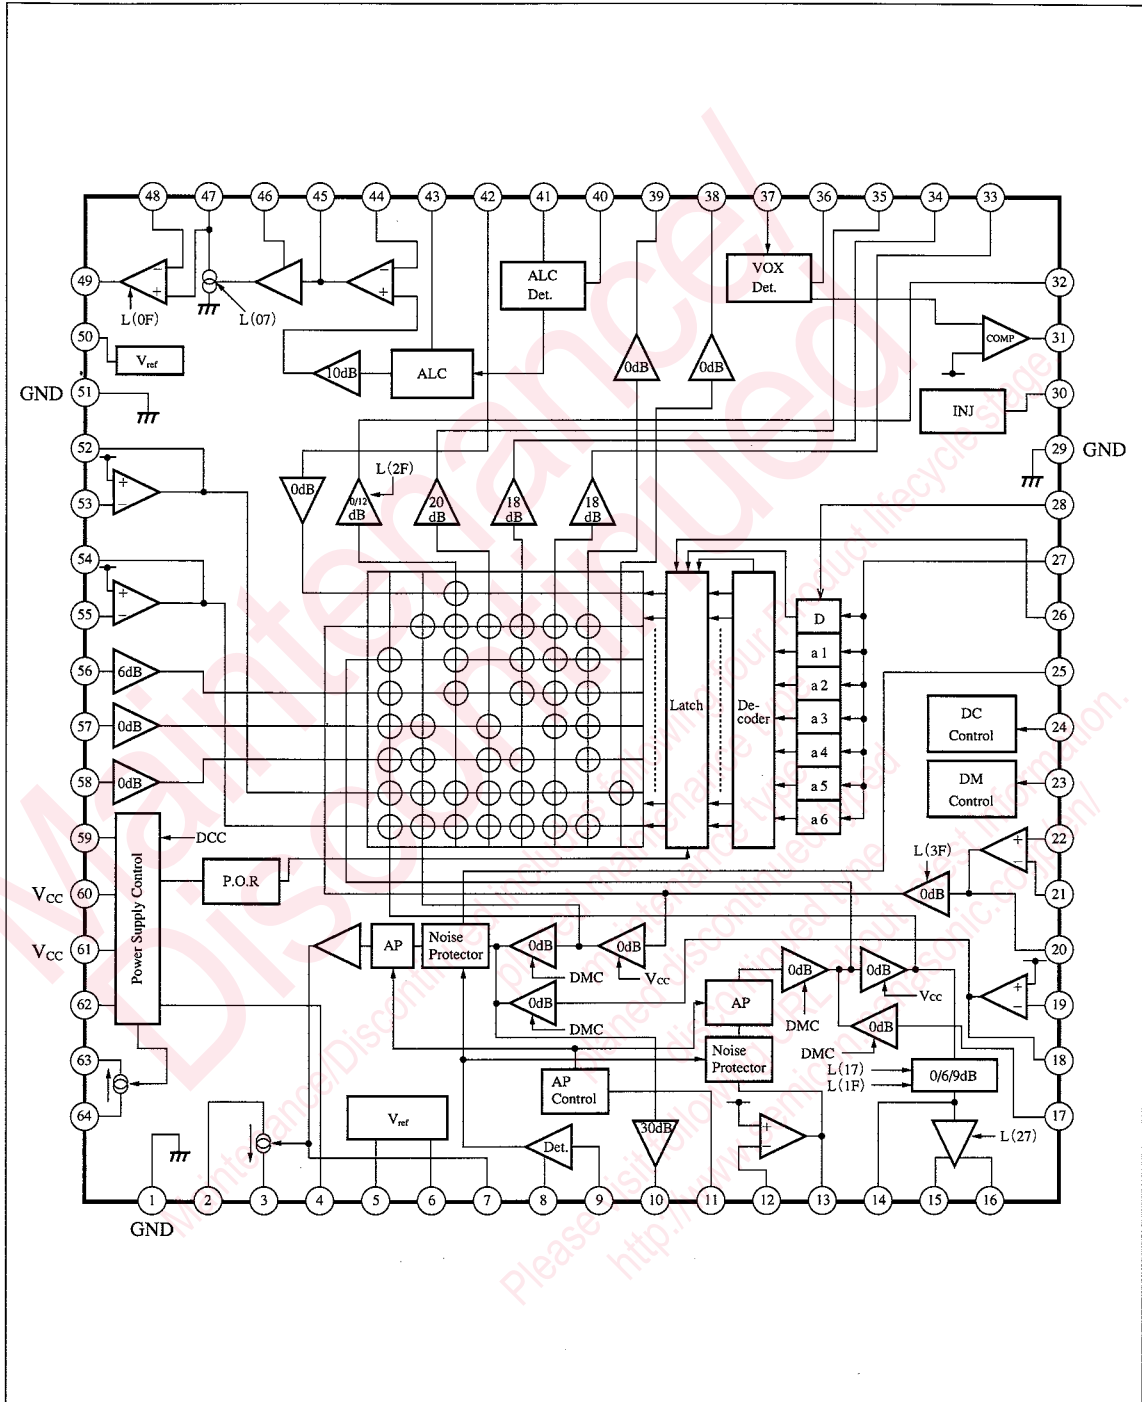

Note) Empty space means "not applicable." Address is in hexadecimal.

2. Other control switches

Address	Description
00	Cross-point SW all reset
07	Recording amp. ON
0F	Playing amp. ON
17	Receiver volume 6 dB up
1F	Receiver volume 9 dB up
27	Handset receiver amp. mute
2F	SP output amp. gain 12 dB down
3F	MIC preamp. mute
09, 21, 29	Receiver noise reduction is enabled.

Note) Address is in hexadecimal.

Request for your special attention and precautions in using the technical information and semiconductors described in this book

- (1) If any of the products or technical information described in this book is to be exported or provided to non-residents, the laws and regulations of the exporting country, especially, those with regard to security export control, must be observed.
- (2) The technical information described in this book is intended only to show the main characteristics and application circuit examples of the products. No license is granted in and to any intellectual property right or other right owned by Panasonic Corporation or any other company. Therefore, no responsibility is assumed by our company as to the infringement upon any such right owned by any other company which may arise as a result of the use of technical information described in this book.
- (3) The products described in this book are intended to be used for standard applications or general electronic equipment (such as office equipment, communications equipment, measuring instruments and household appliances).
Consult our sales staff in advance for information on the following applications:
 - Special applications (such as for airplanes, aerospace, automobiles, traffic control equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
 - Any applications other than the standard applications intended.
- (4) The products and product specifications described in this book are subject to change without notice for modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
- (5) When designing your equipment, comply with the range of absolute maximum rating and the guaranteed operating conditions (operating power supply voltage and operating environment etc.). Especially, please be careful not to exceed the range of absolute maximum rating on the transient state, such as power-on, power-off and mode-switching. Otherwise, we will not be liable for any defect which may arise later in your equipment.
 - Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.
- (6) Comply with the instructions for use in order to prevent breakdown and characteristics change due to external factors (ESD, EOS, thermal stress and mechanical stress) at the time of handling, mounting or at customer's process. When using products for which damp-proof packing is required, satisfy the conditions, such as shelf life and the elapsed time since first opening the packages.
- (7) This book may be not reprinted or reproduced whether wholly or partially, without the prior written permission of our company.

LittleDiode supplies new, hard to find or obsolete electronic components and semiconductors all over the world.

With over two million different components listed you are sure to find the part you need.
