

HITACHI TRANSISTORS

— FOR MEDIUM POWER AMPLIFIER USE —

2SB367 2SB368

The Hitachi 2SB367 and 2SB368 are germanium PNP alloyed junction type transistors, featuring high current transfer ratio which can not be attained by conventional alloyed junction power transistors. The dependence of current gain on collector current having been improved, this series is most suitable for the output stage of car radios, and medium power home radio receivers.

- (Note) 1. When $V_{CC} = -24V$, attach the output transistors on the heat sink plate (150 mm $\times$ 150 mm $\times$ 1.5 mm Al-plate) per transistor, and the driver transistor also attach on the heat sink plate (50 mm $\times$ 50 mm $\times$ 1.5 mm Al-plate) by heat sink fin NZ1B.
2. Secondary Impedance and Max. DC Resistance of driver transformer are specified as follows.
For Circuit 1: Value of Each Windings (Bifilar Winding)
For Circuit 2: Value of Base to Base
3. For Circuit 2, Load Resistance R_L is specified by primary impedance of output transformer (Collector to Collector).
