### APPLICATION INFORMATION

For horizontal deflection circuits, two basic applications are shown in Figs 8 and 9.

The maximum allowable total power dissipation for the diode can be calculated from the thermal resistance  $R_{th\ j-a}$  and the difference between  $T_{j\ max}$  and  $T_{amb\ max}$  in the application. The maximum  $I_{FWM}$  can then be taken from Fig.2.

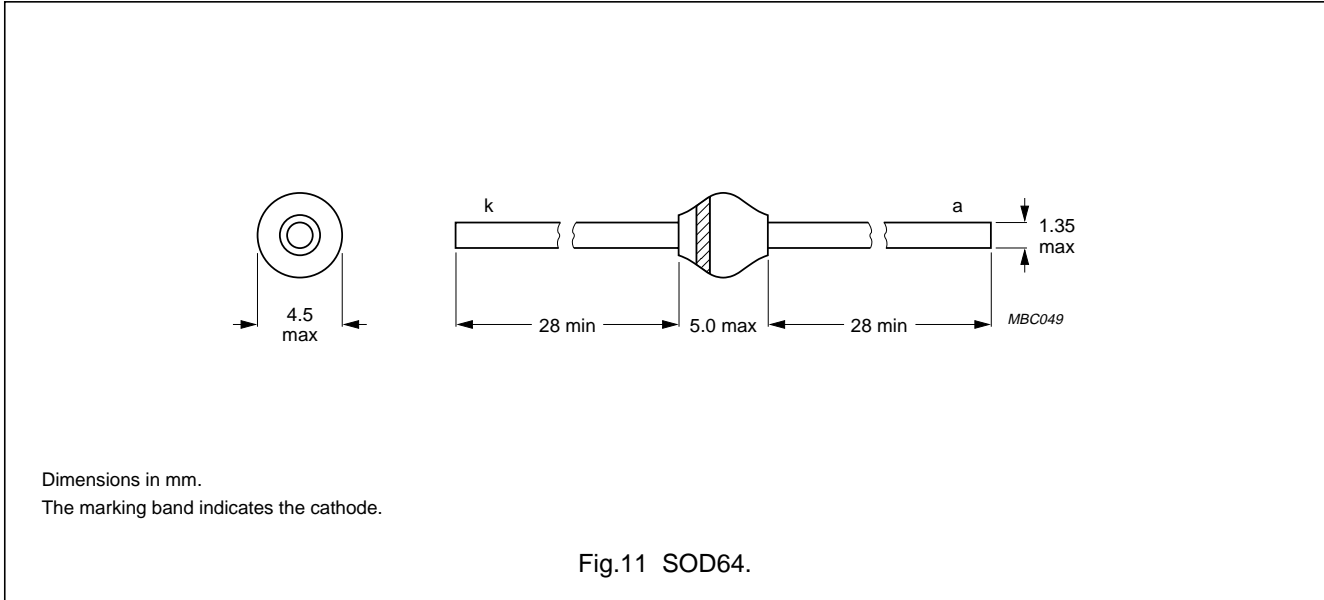

The basic application waveforms in Fig.10 relate to the circuit in Fig.8. In the circuit in Fig.9 the forward conduction time of the diode is shorter, allowing a higher  $I_{FWM}$  (see Fig.2).
