DESCRIPTION

Designed for RF and Video Switching the CWB201 is manufactured using Calogic's high speed CMOS combined with DMOS transistors in a monolithic design resulting in superior performance characteristics. This quad SPST switch array has extensive applications where high frequency video, audio or digital signals are switched or routed. The CWB201 is TTL compatible which is of great benefit to designs that require constant logic switching over a wide range of supply voltages and temperature without a separate power supply.

LOGIC TABLE

Logic	Switch
0	ON
1	OFF

Logic '0' ≤ 0.8V
Logic '1' ≥ 2.42V

NOTE: All devices contain diodes to protect inputs against damage due to high static voltages or electric fields; however, it is advised that precautions be taken not to exceed the maximum recommended input voltages. All unused inputs must be connected to an appropriate logic level (V_{DD} or GND).
