■ FZH 211 S	Q67000-H639-S1	} P-DIP-16
■ FZH 215 S	Q67000-H2431	

Four NAND drivers with open collector outputs, 2 inputs, and N input for delay circuits. The input threshold can be switched to LSL, TTL, or CMOS level, depending on the supply voltage used.

Typical Application

Driver up to 30 V/150 mA, relay driver, and level converter.

Calculation of the load resistance for wired AND connection is carried out as described for FZH 161/181 (refer to LSL data book). In the case of wired AND connection and N wiring, the capacitors C_N must have identical values.
