

54F/74F825 8-Bit D-Type Flip-Flop

General Description

The 'F825 is an 8-bit buffered register. It has Clock Enable and Clear features which are ideal for parity bus interfacing in high performance microprogramming systems. Also included in the 'F825 are multiple enables that allow multi-user control of the interface.

The 'F825 is functionally and pin compatible with AMD's Am29825.

Features

- TRI-STATE® output
- Clock enable and clear
- Multiple output enables
- Direct replacement for AMD's Am24825

Functional Description

The 'F825 consists of eight D-type edge-triggered flip-flops. This device has TRI-STATE true outputs and is organized in broadside pinning. In addition to the clock and output enable pins, the buffered clock (CP) and buffered Output Enable (\overline{OE}) are common to all flip-flops. The flip-flops will store the state of their individual D inputs that meet the setup and hold times requirements on the LOW-to-HIGH CP transition. With the \overline{OE} LOW the contents of the flip-flops are available at the outputs. When the \overline{OE} is HIGH, the outputs go to the high impedance state. Operation of the \overline{OE}

input does not affect the state of the flip-flops. The 'F825 has Clear (\overline{CLR}) and Clock Enable (\overline{EN}) pins.

When the \overline{CLR} is LOW and the \overline{OE} is LOW the outputs are LOW. When \overline{CLR} is HIGH, data can be entered into the flip-flops. When \overline{EN} is LOW, data on the inputs is transferred to the outputs on the LOW-to-HIGH clock transition. When the \overline{EN} is HIGH the outputs do not change state, regardless of the data or clock input transitions.
