

November 1996

Features

- Programmability
- High Rate Slew 30V/ μ s
- Wide Gain Bandwidth 40MHz
- High Gain 150kV/V
- Low Offset Current 5nA
- High Input Impedance 30M Ω
- Single Capacitor Compensation
- DTL/TTL Compatible Inputs

Applications

- Thousands of Applications; Program
 - Signal Selection/Multiplexing
 - Operational Amplifier Gain
 - Oscillator Frequency
 - Filter Characteristics
 - Add-Subtract Functions
 - Integrator Characteristics
 - Comparator Levels

Description

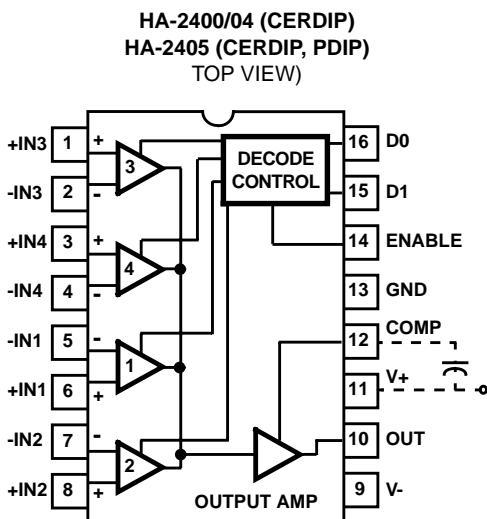

THA-2400/04/05 comprise a series of four-channel programmable amplifiers providing a level of versatility unsurpassed by any other monolithic operational amplifier. Versatility is achieved by employing four input amplifier channels, any one (or none) of which may be electronically selected and connected to a single output stage through DTL/TTL compatible address inputs. The device formed by the output and the selected pair of inputs is an op amp which delivers excellent slew rate, gain bandwidth and power bandwidth performance. Other advantageous features for these dielectrically isolated amplifiers include high voltage gain and input impedance coupled with low input offset voltage and offset current. External compensation is not required on this device at closed loop gains greater than 10.

Each channel of the HA-2400/04/05 can be controlled and operated with suitable feedback networks in any of the standard op amp configurations. This specialization makes these amplifiers excellent components for multiplexing signal selection and mathematical function designs. With 30V/ μ s slew rate, 40MHz gain bandwidth and 30M Ω input impedance these devices are ideal building blocks for signal generators, active filters and data acquisition designs. Programmability, coupled with 4mV typical offset voltage and 5nA offset current, makes these amplifiers outstanding components for signal conditioning circuits.

During Disable Mode V_{OUT} goes to V_- . For high output impedance during Disable, see HA2444.

For further design ideas, see Application Note AN514.

Operating Conditions

Temperature Range	
HA-2400-2	-55 $^\circ\text{C}$ to 125 $^\circ\text{C}$
HA-2404-4	-25 $^\circ\text{C}$ to 85 $^\circ\text{C}$
HA-2405-5	0 $^\circ\text{C}$ to 75 $^\circ\text{C}$

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

- Maximum power dissipation including output load, must be designed to maintain the junction temperature below 175 $^\circ\text{C}$ for the ceramic package, and below 150 $^\circ\text{C}$ for the plastic packages.
- θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

NOTES:

3. $A_V = +10$, $C_{COMP} = 0$, $R_L = 2k\Omega$, $C_L = 50pF$.
4. $A_V = +1$, $C_{COMP} = 15pF$, $R_L = 2k\Omega$, $C_L = 50pF$.
5. To 0.1% of final value.
6. To 10% of final value; output then slews at normal rate to final value.
7. Unselected input to output; $V_{IN} = \pm 10V_{DC}$.
8. Unselected channels have approximately the same input parameters.
9. Guaranteed by design.
10. Full Power Bandwidth based on slew rate measurement using: $FPBW = \frac{SR}{2\pi V_{PEAK}}$; $V_{PEAK} = 5V$.
11. See Figure 13 for test circuit.
