# Postive J-K positive edge-triggered flip-flops

# 74F109

## FEATURE

- Industrial temperature range available (-40°C to +85°C)

## DESCRIPTION

The 74F109 is a dual positive edge-triggered JK-type flip-flop featuring individual J, K, clock, set, and reset inputs; also true and complementary outputs. Set ( $\overline{SD}$ ) and reset ( $\overline{RD}$ ) are asynchronous active low inputs and operate independently of the clock (CP) input. The J and K are edge-triggered inputs which control the state changes of the flip-flops as described in the function table. Clock triggering occurs at a voltage level and is not directly related to the transition time of the positive-going pulse. The J and K inputs must be stable just one setup time prior to the low-to-high transition of the clock for predictable operation. The JK design allows operation as a D flip-flop by tying J and K inputs together. Although the clock input is level sensitive, the positive transition of the clock pulse between the 0.8V and 2.0V levels should be equal to or less than the clock to output delay time for reliable operation.

## FUNCTION TABLE

INPUTS					OUTPUTS		OPERATING MODE
S $\bar{D}$	R $\bar{D}$	CP	J	K	Q	Q $\bar{}$	
L	H	X	X	X	H	L	Asynchronous set
H	L	X	X	X	L	H	Asynchronous reset
L	L	X	X	X	H	H	Undetermined*
H	H	$\uparrow$	X	X	q	q $\bar{}$	Hold
H	H	$\uparrow$	h	l	q $\bar{}$	q	Toggle
H	H	$\uparrow$	h	h	H	L	Load "1" (set)
H	H	$\uparrow$	l	l	L	H	Load "0" (reset)
H	H	$\uparrow$	l	h	q	q $\bar{}$	Hold 'no change'

### NOTES:

- H = High-voltage level
- h = High-voltage level one setup time prior to low-to-high clock transition
- L = Low-voltage level
- l = Low-voltage level one setup time prior to low-to-high clock transition
- q = Lower case indicate the state of the referenced output prior to the low-to-high clock transition
- X = Don't care
- $\uparrow$  = Low-to-high clock transition
- $\uparrow$  = Not low-to-high clock transition
- \* = Both outputs will be high if both S $\bar{D}$  and R $\bar{D}$  go low simultaneously

**NOTES:**

- For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
- All typical values are at V<sub>CC</sub> = 5V, T<sub>amb</sub> = 25°C.
- Not more than one output should be shorted at a time. For testing I<sub>OS</sub>, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a high output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, I<sub>OS</sub> tests should be performed last.
- Measure I<sub>CC</sub> with the clock input grounded and all outputs open, then with Q and Q̄ outputs high in turn.

## Definitions

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

**Limiting values definition** — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## Disclaimers

**Life support** — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

**Right to make changes** — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
